**Section 03 01 00**

**Concrete Rehabilitation**

---

### Part 1 - General

1.01 **Summary**

This Specification shall be read as a whole by all parties concerned. Each Section may contain more or less the complete Work of any trade. The Contractor is solely responsible to make clear to the Subcontractors the extent of their Work and coordinate overlapping Work.

1.02 **System description**

This specification describes the patching or overlay of interior and/or exterior horizontal surfaces with a polymer-modified, portland cement mortar/concrete.

1.03 **Related sections**

- Maintenance of Cast-in-Place Concrete: Section 03 01 30
- Maintenance of Precast Concrete: Section 03 01 40
- Maintenance of Cast Decks and Underlayment: Section 03 01 50
- Maintenance of Mass Concrete: Section 03 01 70
- Structural Concrete: Section 03 33 00

1.04 **References**

The following standards are applicable to this section:

- ASTM C-109 - Compressive Strength
- ASTM C-293 - Flexural Strength
- ASTM C-496 - Splitting Tensile Strength
- ASTM C-882 modified - Slant Shear Strength

---

**SIKA SPECIFICATION NOTE:** This guide specification includes test methods, materials and installation procedures for SikaRepair®-222, as a repair material for spalled horizontal concrete surfaces, walkways, ramps, steps, etc. SikaRepair®-222 is a one-component, early strength gaining, cementitious, patching material for horizontal repair of concrete. This guide specification should be adapted to suit the needs and conditions of individual projects. It is prepared in CSI Master Format and should be included as a separate section under Division 3 – Concrete.

---
1.05 Quality Assurance
   A. **Manufacturing qualifications**: The manufacturer of the specified product shall be ISO 9001 certified and have in existence a recognized ongoing quality assurance program independently audited on a regular basis.
   B. **Contractor qualifications**: Contractor shall be qualified in the field of concrete repair and protection with a successful track record of 5 years or more. Contractor shall maintain qualified personnel who have received product training by a manufacturer’s representative.
   C. Store and apply materials in accordance with all safety and weather conditions required by manufacturer or as modified by applicable rules and regulations of local, state and federal authorities having jurisdiction. Consult Safety Data Sheets (SDS) for complete handling recommendations.

1.06 Delivery, Storage, and Handling
   A. All materials must be delivered in original, unopened containers with the manufacturer’s name, labels, product identification, and batch numbers. Damaged material must be removed from the site immediately.
   B. Store all materials off the ground and protect from rain, freezing or excessive heat until ready for use.
   C. Condition the specified product as recommended by the manufacturer.

1.07 Job Conditions
   A. **Environmental Conditions**: Do not apply material if it is raining or snowing or if such conditions appear to be imminent. Minimum application temperature 45°F (7°C) and rising.
   B. **Protection**: Precautions should be taken to avoid damage to any surface near the work zone due to mixing and handling of the specified material.

1.08 Submittals
   A. Submit two copies of manufacturer’s literature, to include: Product Data Sheets (PDS), and appropriate Safety Data Sheets (SDS).
   B. Submit copy of Certificate of Approved Contractor status by manufacturer.

1.09 Warranty
   Provide a written warranty from the manufacturer against defects of materials for a period of one (1) year, beginning with date of substantial completion of the project.
Part 2 - Products

2.01 Manufacturer

SikaRepair®-222 and SikaLatex® R, as manufactured by Sika® Corporation, is considered to conform to the requirements of this specification.

2.02 Materials

Portland cement mortar:

A. The repair mortar shall be a blend of selected portland cements, specially graded aggregates, admixtures for controlling setting time, water reducers for workability, and an organic accelerator.

B. The materials shall be non-combustible, both before and after cure.

C. The materials shall be supplied in a factory-proportioned unit.

D. The portland cement mortar must be placeable from 1/8” to 1” (3-25 mm) in depth per lift for horizontal applications.

To prepare a portland cement concrete: aggregate shall conform to ASTM C-33. The factory-proportioned unit shall be extended with 32 lb max. of a 3/8” (No.8 distribution per ASTM C-33, Table II) clean, well-graded, saturated surface dry aggregate, having low absorption and high density. Aggregate must be approved for use by the Engineer.

2.03 Performance Criteria

Typical Properties of the mixed polymer-modified, portland cement mortar:

1. Yield 0.42 ft³ (0.01 m³)per bag
2. Color Concrete gray
3. Mixing Ratio 3/4 - 7/8 gal. (2.8 - 3.3 L) of liquid
4. Application Thickness
   a. Min 1/8” (3 mm)
   b. Max 1” (25 mm)
5. Application Temp > 45 °F (7 °C)
6. Working Time ~ 30 minutes
7. Compressive Strength (ASTM C-109)
   a. 1 day - 2,300 psi (15.9 MPa)
   b. 7 days 4,500 psi (31.0 MPa)
   c. 28 days 5,500 psi (37.9 MPa)
8. Flexural Strength (ASTM C-293) 28 day – 1200 psi (8.2 MPa)
9. Splitting Tensile Strength (ASTM C-496) 28 day – 700 psi (4.8 MPa)
10. Slant Shear Strength (ASTM C-882 modified*) 28 days - 2,000 psi (13.8 MPa)

Note: Tests above were performed with the material and curing conditions @ 71°F – 75°F and 45 - 55% relative humidity.
Part 3 – Execution

3.01 Surface Preparation

A. Areas to be repaired must be clean, sound, and free of contaminants. All loose and deteriorated concrete shall be removed by mechanical means. Mechanically prepare concrete substrate to obtain a surface profile of ± 1/16” (CSP 5 or greater as per ICRI Guidelines) with a new exposed aggregate surface. Area to be patched shall not be less than 1/8” in depth.

B. Where reinforcing steel with active corrosion is encountered, sandblast the steel to a white metal finish to remove all contaminants and rust. Where corrosion has occurred due to the presence of chlorides, the steel shall be high pressure washed after mechanical cleaning. Prime steel with 2 coats of Sika® Armatec® 110 EpoCem as per the Product Data Sheet (PDS).

3.02 Mixing and Application

A. Mechanically mix in appropriate sized mortar mixer or with a Sika jiffy paddle and low speed (400-600 rpm) drill. Pour approximately 3/4 gal of SikaLatex® R into the mixing container. Add the powder while continuing to mix. Mix to a uniform consistency for a maximum of three minutes. Add up 7/8 gal of SikaLatex® R to mix if a greater flow is desired. Should smaller quantities be needed, be sure the proper SikaLatex® R powder ratio is maintained and that the dry material is uniformly blended before mixing the components together. Do not retemper material.

B. Mixing of the rapid-setting portland cement concrete: Pour 3/4 – 7/8 gal of SikaLatex® R into the mixing container. Add the powder while continuing to mix. Add correct amount of the pre-approved coarse aggregate, and continue mixing to a uniform consistency. Mixing time should be 3 minutes maximum. Note: SikaLatex® R may be varied to achieve the desired consistency. Do not add more SikaLatex® R.

C. Placement Procedure: At the time of application, the substrate should be Saturated Surface Dry (SSD) with no standing water. Mortar and/or concrete must be scrubbed into substrate filling all pores and voids. While the scrub coat is still plastic, force material against edge of repair, working toward center. If repair area is too large to fill while scrub coat is still wet use Sika® Armatec® 110 EpoCem in lieu of scrub coat. After filling, consolidate, then screed. Allow mortar or concrete to set to desired stiffness, then finish with trowel, manual or power, for smooth surface. Broom or burlap drag for rough surface. Areas where the depth of the repair is less than 1” shall be repaired with portland cement mortar. In areas where the depth of the repair is greater than 1”, the repair shall be made with portland cement concrete.

D. As per ACI recommendations for portland cement concrete, curing is required. Moist cure with wet burlap and polyethylene, a fine mist of water or a water-based* compatible curing compound. Moist curing should commence immediately after finishing and continue for 48 hours. Protect newly applied material from rain, sun, and wind until compressive strength is 70% of the 28 day compressive strength. To prevent from freezing cover with insulating material. Setting time is dependent on temperature and humidity.

*Pretesting of curing compound is recommended.

E. Adhere to all procedures, limitations and cautions for the polymer-modified portland cement mortar in the manufacturer’s current printed Product Data Sheet (PDS) and literature.

3.02 Cleaning

A. The uncured polymer-modified portland cement mortar can be cleaned from tools with water. The cured polymer-modified portland cement mortar can only be removed mechanically.

B. Leave finished work and work area in a neat, clean condition without evidence of spillovers onto adjacent areas.
SikaRepair®-222 with SikaLatex® R

a) Crack Repair

1. Substrate shall be clean, sound and lattinance-free prior to repairing.
2. Pre-soak the substrate to provide SSD condition prior to applying repair material.
3. Apply scrub coat of the repair material to the prepared substrate.
4. While scrub coat is wet place SikaRepair®-222 with SikaLatex® R, filling the entire cavity. Strike off and finish as required. Wet cure and protect as per the PDS.

b) Hand-applied Repair

1. Substrate shall be clean, sound and lattinance-free prior to repairing. (Refer to ICRI Technical Guideline No. 03730.)
2. Pre-soak the substrate to provide SSD condition prior to applying repair material.
3. Apply scrub coat of the repair material to the prepared substrate, filling all pours and voids.
4. While scrub coat is wet place SikaRepair®-222 with SikaLatex® R, filling the entire cavity. Screed off and finish as required. Wet cure and protect as per the PDS.
c) Overlay

1. Substrate shall be clean, sound and lattinance-free prior to repairing. Surface profile shall be a CSP 5-8. (Refer to ICRI Technical Guideline No. 03730.)

2. Pre-soak the substrate to provide SSD condition prior to applying repair material.

3. Apply scrub coat of the repair material to the prepared substrate, filling all pours and voids.

4. While scrub coat is wet place SikaRepair-222 with SikaLatex® R filling the entire cavity. Strike off and finish as required. Wet cure and protect as per the PDS.

Note:
If repair area is too large to fill while scrub coat is still wet, use Sika® Armatec® 110 EpoCem in lieu of the scrub coat.
If reinforcing steel is located within the repair location refer to Spec Component SC-201
For applications greater than 1” in depth, add 3/8” coarse aggregate in accordance to the PDS.

Concrete Restoration Systems by Sika Corporation, 201 Polito Avenue, Lyndhurst, NJ 07071

The preceding specifications are provided by Sika Corporation as a guide for informational purposes only and are not intended to replace sound engineering practice and judgment and should not be relied upon for that purpose. Sika Corporation makes no warranty of any kind, either express or implied, as to the accuracy, completeness or the contents of these guide specifications. Sika Corporation assumes no liability with respect to the provision or use of these guide specifications, nor shall any legal relationship be created by, or arise from, the provision of such specifications Sika Shall Not Be Responsible Under Any Legal Theory To Any Third Party For Any Direct Or Consequential Damages Of Any Kind Arising From The Use Of These Guide Specifications. The specifier, architect, engineer or design professional or contractor for a particular project bears the sole responsibility for the preparation and approval of the specifications and determining their suitability for a particular project or application.

Prior to each use of any Sika product, the user must always read and follow the warnings and instructions on the product's most current Product Data Sheet, product label and Safety Data Sheet which are available online at http://usa.sika.com/ or by calling Sika’s Technical Service Department at 800-933-7452. Nothing contained in any Sika materials relieves the user of the obligation to read and follow the warnings and instruction for each Sika product as set forth in the current Product Data Sheet, product label and Safety Data Sheet prior to product use.
