Sikagard® 570

Elastomeric, UV curable, high build, fully reinforceable, acrylic facade coating.

Description
Sikagard 570 is an elastomeric, UV curing, crack-bridging, anti-carbonation, fully reinforceable, acrylic protective coating. Sikagard 570 provides protection to reinforced concrete from the ingress of carbon dioxide and other aggressive gasses. It offers high resistance to chlorides and other waterborne salts and excellent UV light resistance. Sikagard 570 will not act as a vapor barrier and will enhance the appearance of the structure. Sikagard 570 is cured by exposure to UV radiation present in sunlight, which aids in the development of a surface skin which is relatively harder than the bulk of the coating beneath. This leads to a more durable surface and reduced dirt pickup. Similarly, as the coating does eventually begin to wear, the exposed material will maintain its hardened surface.

Where to Use
Protective, crack-bridging coating for concrete, mortar, stucco, masonry, and exterior finishing systems subject to cracking/dynamic movement. For use on building and civil engineering structures subject to cracking or as the top coat in complete repair and protection systems.

Advantages
- UV curable top coat for a more durable wearing surface and lesser dirt pickup.
- Can bridge dynamically moving cracks
- Excellent carbonation barrier
- Vapor permeable
- Provides resistance to weathering and frost
- Crack bridging properties maintained at low temperatures
- Can be fully reinforced with Sika Flexitape or Sika Reemat Standard
- Excellent long term UV light resistance
- Can be applied by brush, roller, or airless spray
- Good color stability
- Extremely resistant to dirt pick up and mildew
- Nontoxic, nonflammable as a system
- Easily maintained silk finish

Packaging
5 gallon

Coverage
Theoretical yield for neat system: 100 sq. ft./gal/coat. Recommended 'wet' film thickness: 16 mils/coat. Recommended 'dry' film thickness: 8 mils/coat. Normal coating system is two coats at a total dry film thickness of 16 mils. Consumption is dependent on porosity of substrate. In addition, allowance must be made for surface profile, unavoidable variation in applied film thickness, loss and waste. Sikagard Elastic Base Coat can be used as a first coat in a two coat system of Sikagard 570.

Theoretical yield for reinforced system: 40 sq. ft./gal for the base coat with reinforcement: 40 mils 'wet' film thickness. A top coat at 80 sq. ft./gal to fully encapsulate the reinforcement: 20 mils 'wet' film thickness. In addition, allowance must be made for surface profile, unavoidable variation in applied film thickness, loss and waste.

Tensile Properties (ASTM D-412 modified after 21 days cure):
- Tensile Strength: 250 psi
- Elongation at Break: 675% at 73°F (23°C)
- Tensile Strength at 0°F (-18°C): 1200 psi
- Elongation at Break at 0°F (-18°C): 275%

Waiting Time (between coats) and Curing Rates:
- 45°F (8°C): 24 hours
- 68°F (20°C): 12 hours
- 85°F (30°C): 6 hours

Rain resistant (at 75% R.H.):
- 24 hours
- 12 hours
- 8 hours
- 6 hours

Water Vapor Diffusion (at 16 mils = 400 microns dry film thickness):

μ - value H2O (diffusion coefficient) = 2.146

PRIOR TO EACH USE OF ANY SIKA PRODUCT, THE USER MUST ALWAYS READ AND FOLLOW THE WARNINGS AND INSTRUCTIONS ON THE PRODUCT'S MOST CURRENT PRODUCT DATA SHEET, PRODUCT LABEL AND SAFETY DATA SHEET WHICH ARE AVAILABLE ONLINE AT HTTP://USA.SIKA.COM/ OR BY CALLING SIKA'S TECHNICAL SERVICE DEPARTMENT AT 800.933.7452 NOTHING CONTAINED IN ANY SIKA MATERIALS RELIEVES THE USER OF THE OBLIGATION TO READ AND FOLLOW THE WARNINGS AND INSTRUCTIONS FOR EACH SIKA PRODUCT AS SET FORTH IN THE CURRENT PRODUCT DATA SHEET, PRODUCT LABEL AND SAFETY DATA SHEET PRIOR TO PRODUCT USE.
**Construction**

**Surface Preparation**

All surfaces to be coated must be dry, clean, sound, and frost free with curing compound will dry cure.

**How To Use**

UV curing requires sunlight to harden the surface. This produces a tactile coating reflecting the composite nature of the coating film. In the complete absence of sunlight a softer surface will result although the product will dry cure.

**Curing Mechanism**

Surface preparation: All surfaces to be coated must be dry, clean, sound, and frost free with curing compound. Where necessary, surfaces should be prepared mechanically by blast cleaning or high speed pressure water jetting. Allow adequate time for drying. Bugholes, cracks or irregularities of substrate should be filled and leveled with SikaTop, SikaRepair, SikaQuick or acrylic surface fillers as appropriate.

**Priming**

All porous areas or concrete with excessive porosity should be primed using Sikagard 552W Primer or SikaLatex R to allow easy application of Sikagard 570.

**Crack Treatment**

Crack Treatment: Treatment of existing cracks and reinforcement Sikagard 570 is designed to accommodate existing cracks and those starting from “zero” up to defined limits. The product will fill and bridge minor static cracks up to 0.04” if applied more thickly on those areas. Static cracks larger than 0.04” should be filled with acrylic filler prior to being coated with Sikagard 570. Dynamic cracks can also be addressed this way as well, but should be filled prior with a flexible sealant.

**Mixing**

Stir the coating to ensure uniformity using a slow speed (400-600 rpm) drill and 1/2” jiffy style mixing paddle. To minimize color variation when using multiple units, blend two pails of Sikagard 570. Use one pail and maintain the second pail to repeat this procedure (boxing) for the entire application.

**Application**

Any areas of glass or other surfaces should be masked. Recommended application temperatures (ambient and substrate) 40 - 95 F (7-35 C). Sikagard 570 can be applied by brush, roller, or spray over entire area moving in one direction. Allow a minimum of two hours prior to recoating. At lower temperatures and high humidity, waiting time will be prolonged. At higher temperatures, work carefully to maintain a wet edge. As with all coatings, job site mock-ups should always be completed to confirm acceptability of workmanship, material and aesthetics. 

- **NOTE:** To achieve a dry film thickness of 16 mils, two coats should be anticipated. For maximum adhesion, (especially on porous substrates) the use of Sikagard 552W is recommended. Sikagard 552W primer can be applied by brush or roller. Brushing provides more even and pore free coats and better penetration.

**Limitations**

- Not designed for use as a traffic bearing surface
- Substrates must be dry prior to application
- Minimum age of concrete prior to application is 14 days, depending on curing and drying conditions (moisture content must be below 5%)
- Minimum age of SikaTop, SikaRepair, or SikaQuick prior to application is three days, depending on curing and drying conditions (moisture content must be below 5%)
- Allow sufficient time for substrate to dry after rain or other inclement conditions
- Protect from freezing. If frozen, discard
- Sikagard 570 should not be applied at relative humidity greater than 90%, or if rain is forecast within the specified rain resistance period
- Maximum crack width 1/32”
- During application, regular monitoring of the wet film thickness and material consumption is advised to ensure that the correct layer thickness is achieved. When over-coating existing coatings, compatibility and adhesion testing is recommended
- When over-coating SikaFlex sealants, a prime coat of Sikagard 570 Accent Base Coat may be necessary over the sealant to minimize dirt pick up on cured coating.
- Do not store Sikagard 570 in direct sunlight for prolonged periods
- Strong winds can cause shrinkage if material is applied at lower temperatures
- Ensure that the primer is thoroughly dry before over-coating to prevent formation of bubbles and blisters, particularly in warmer weather
- Not recommended for roofing

**Sika**
Prior to each use of any Sika product, the user must always read and follow the warnings and instructions on the product’s most current Product Data Sheet, product label and Safety Data Sheet which are available online at http://usa.sika.com or by calling Sika’s Technical Service Department at 800-933-7452. Nothing contained in any Sika materials relieves the user of the obligation to read and follow the warnings and instructions for each Sika product as set forth in the current Product Data Sheet, product label and Safety Data Sheet prior to product use.

SIKA warrants this product for one year from date of installation to be free from manufacturing defects and to meet the technical properties on the current Product Data Sheet if used as directed within shelf life. User determines suitability of product for intended use and assumes all risks. Buyer’s sole remedy shall be limited to the purchase price or replacement of product exclusive of labor or cost of labor. NO OTHER WARRANTIES EXPRESS OR IMPLIED SHALL APPLY INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SIKA SHALL NOT BE LIABLE UNDER ANY LEGAL THEORY FOR SPECIAL OR CONSEQUENTIAL DAMAGES. SIKA SHALL NOT BE RESPONSIBLE FOR THE USE OF THIS PRODUCT IN A MANNER TO INFRINGE ON ANY PATENT OR ANY OTHER INTELLECTUAL PROPERTY RIGHTS HELD BY OTHERS. SALE OF SIKA PRODUCTS ARE SUBJECT SIKA’S TERMS AND CONDITIONS OF SALE AVAILABLE AT HTTP://USA.SIKA.COM/ OR BY CALLING 201-933-8800.
