SikaQuick 1000

Application Instructions

Sika Corporation
SikaQuick 1000

Rapid Hardening Repair Mortar with Extended Working Time.

Sika Quick is a 1-component, rapid hardening, early strength gaining cementitious based material for patching concrete.
SikaQuick 1000

Where to use:

- Use on grade, above and below grade on concrete.
- Highway overlays and repairs.
- Structural Repair material for concrete roadways, parking structures, bridges, dams and ramps.
- Full depth patching.
- Economical patching material for horizontal repairs of concrete and mortars.
SikaQuick 1000

Coverage:

▲ SikaQuick 1000 Mortar
   Approximately 0.43 cu.ft

▲ SikaQuick 1000 Concrete
   When extended with 25 lbs. of 3/8 in gravel approximate yield = 0.6 cu.ft
SikaQuick 1000

▲ Packaging:

50 lb – Multi wall Bag
40 Bags/Pallet
Surface Preparation

Cementitious Substrates:

1. Should be clean and sound.
2. Remove contaminations and bond inhibiting materials from repaired area.
3. Obtain exposed/fractured aggregate surface ~1/8 to 1/4 inch profile (ICRI CSP 6 & above).
4. Substrate must be saturated surface dry (SSD) with no standing water.
Surface Preparation

▲ Cementitious Substrates:

- Surface should be cleaned and roughened to create a profile.
Surface Preparation

▲ Saw cut around perimeter or repair area to achieve a minimum 1/8” shoulder.

▲ This will eliminate feather edging the product and give a clean transition for the repair.
Surface Preparation

▲ Steel:

- Remove all corrosion and contaminants from exposed steel.
- Surface should be cleaned thoroughly by blast cleaning or mechanical means.
- Exposed steel should be cleaned to white steel.
- If half of the diameter is exposed, chip behind bar, ½” minimum for mortar only.
Steel Preparation

▲ Steel should be cleaned to a bright metal finish.
Tools Required

▲ ½” Drill Motor
▲ Low speed drill 400-600 rpm
▲ Mortar mixer or Jiffy mixer
▲ Margin trowel
▲ Steel/Mag Trowel
▲ Spatula
Surface Preparation

△ Saw cut around perimeter or repair area to achieve a minimum 3/8” shoulder. This will eliminate feather edging the product and give a clean transition for the repair.
Surface Preparation

Steel:

1. Remove all corrosion and contaminants from exposed steel.
2. Surface should be cleaned thoroughly by blast cleaning or mechanical means.
3. Exposed steel should be cleaned to white steel.
4. If half of the diameter is exposed, chip behind bar, ½” minimum for mortar only.

Sika Corporation
Mixing Equipments

I. Mortar Mixer
II. Drill and Paddle.

Wet down tools and equipments before proceeding to mix.
Mixing - SikaQuick Mortar

1. Water – 4.5-5 Pts/Bag
2. Latex-R- 4.5-5 Pts/Bag.
3. Start with adding liquid to the mixing container.
4. Slowly add powder.
5. Once all the powder is added mix for **3 minutes**.
6. Do not add any more than 5 pts of liquid. water.

Sika Corporation
Mixing- SikaQuick Concrete

1. Water – 4.5-5 Pts/Bag
2. Latex-R- 4.5-5 Pts/Bag.
4. Stone – Weigh Before SSD.
5. Start with adding liquid to the mixing container.
7. Once all the powder is added and mixed add stone.
8. Mix time 3 minutes after everything is added.
9. Do not add any more than 5 pts of liquid. water.
Consult Technical Data Sheets for detailed recommendations on aggregate selection.

Sika Corporation
Min / Max application thickness

▲ Neat
  • Min  1/4 inch
  • Max  1 inch

▲ Extended
  • Min  1 inch
  • Max  6 inches
Scrub/Slurry Coat

Sika Corporation
Placing
Placement
Finishing
SikaTop Curing

▲ Cure as per ACI recommendations. Curing is required.
▲ Moist cure with wet burlap and polyethylene, a fine mist of water.
▲ Moist curing should commence immediately after finishing.
▲ Protect newly applied material from direct sun light, wind, rain and frost.
