APPLICATION INSTRUCTIONS

SUBSTRATE PREPARATION
All surfaces must be clean, sound, dry, and free of loose materials or contaminants such as water, frost, ice, oil and grease that would interfere with proper adhesion and compromise the performance of the product.
In accordance with the ICRI Technical Guideline No. 310.2R-2013, newly poured concrete surfaces may be finished by forming, wood float, steel or power trowel, or broom finished to meet the equivalency of a CSP type surface between a rating of 2 – 5.
Application to structural concrete surfaces and...
DensDeck Prime require priming with Vapor Retarder Primer TA or Vapor Retarder Primer BE. See Vapor Retarder Primer TA or Vapor Retarder Primer BE product data sheet for additional information.

APPLICATION

Prior to installation, unroll Ply Sheet HA 118 onto the roof surface and allow it to relax. Place Ply Sheet HA 118 in desired position and back roll the product. Adhere Ply Sheet HA 118 to the substrate with Type III or Type IV asphalt according to the asphalt manufacturer’s instructions and industry standards. Apply a full mopping of Type III or Type IV asphalt in accordance with manufacturer’s instructions at a minimum rate of 25 lbs per 100 square feet (1.2 kg/m²). Install Ply Sheet HA 118 so that there are no significant and avoidable air spaces between the ply sheet and the substrate.

Ply Sheet HA 118 can be installed with Sika’s cold applied vapor retarder adhesives. See Sika’s vapor retarder adhesive product data sheets for additional information.

Overlap side laps 3” (76 mm) and end laps 6” (152 mm).

COVERAGE
