## APPLICATION INSTRUCTIONS

### APPLICATION

The Fastener Polymer GypTec can be installed into some cementitious wood fiber decks without predrilling. A pilot hole is required for gypsum decks. Use a 7/16, 1/2 or 9/16" drill bit as determined by pullout test results. Pilot holes must be a minimum of 1/2" (13 mm) deeper than embedment.

Fasteners should be installed using a heavy duty variable speed screw gun. Installation at a low rpm is recommended. Minimum fastener embedment into the deck should be 1-1/2 - 2" (38 - 51 mm) is recommended and required on FM insured decks.

Care must be taken to not damage the roof deck and should never penetrate the underside of the deck. Choose the correct fastener length and do not overdrive or underdrive the fastener. **Pullout tests are required** prior to job start for technical evaluation.

### MAINTENANCE

Standard maintenance of Sarnafil® or Sikaplan® systems should include regular inspection of flashings, drains and termination sealants at least twice a year and after each storm.
