APPLICATION INSTRUCTIONS

APPLICATION
The Sarnafastener MAXLoad is fastened straight into the roof deck with an extra heavy-duty (6 amp minimum), variable speed (2000 rpm maximum), reversible screwgun with a clutch release and a #3 Phillips drive bit. Sarnafastener MAXLoad must penetrate steel roof decks by 1" (25mm) and the underside of wood sheathing roof decks by a 1/2" (13mm).

Care must be taken to not damage the roof deck. Choose the correct fastener length and do not overdrive or underdrive the fastener. Pullout tests are required prior to job start when used with existing wood sheathing roof decks for technical evaluation.

MAINTENANCE
Standard maintenance of roofs should include regular inspections of flashings, drains and termination sealants at least twice a year and after each storm.
