APPLICATION INSTRUCTIONS

APPLICATION

Sarnafil G 410 is installed after proper preparation of the approved substrate. The membrane is unrolled into Sarnacol® adhesive in accordance with Sika’s technical requirements and then pressed into place with a minimum 100 lb (45 kg) steel roller. G 410 seams are heat-welded together by trained operators using hot-air welding equipment. Different Sarnacol® adhesives require different application methods. Please consult Sika’s Specifications or Applicator Handbook for detailed installation procedures.

MAINTENANCE

Standard maintenance of Sarnafil systems should include inspections of flashings, drains, and termination sealants at least twice a year and after each storm.
