DESRIPTION

The Sikadur CombiFlex® SG System is a high performance joint and crack sealing system consisting of a ready-to-use joint sealant and a high strength adhesive. This system provides a versatile solution for sealing and repairing cracks and joints in concrete structures. The Sikadur CombiFlex® SG System is designed for use in a wide range of applications, including construction, repair, and maintenance.

USES

Sealing all types of joints and cracks in many different applications, including:

- Construction joints
- Expansion joints
- Movement joints
- Crack repairs
- Repair of damaged substrates
- Interface sealing

CHARACTERISTICS / ADVANTAGES

- Versatile system suitable for many different applications
- High bond strength and excellent adhesion
- Resistant to weathering and weather elements
- Easy to apply and cure
- Excellent heat resistance
- Good adhesion to a wide range of substrates
- High flexibility and elongation
- Suitable for vertical and horizontal surfaces
- Can be applied at low and high temperatures
- Low viscosity for easy application
- Extended working time
- Easy to use

* Dimensions and appearance may vary due to the application process. Actual performance may differ from the information provided in this guide. Always consult the manufacturer’s instructions for specific application guidelines.
