|                              | • | must not be discharged into drains.  |
|                              |   |  |

|  |   | Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. |
|--|---|---|
| Special protective equipment for fire-fighters | : | In the event of fire, wear self-contained breathing apparatus.  |

### SECTION 6. ACCIDENTAL RELEASE MEASURES

| Personal precautions, protec-<br>tive equipment and emer-<br>gency procedures | : | Use personal protective equipment.<br>Deny access to unprotected persons.  |
|---|---|--|
| Environmental precautions   | : | Do not flush into surface water or sanitary sewer system.<br>Local authorities should be advised if significant spillages<br>cannot be contained.              |
| Methods and materials for containment and cleaning up                         | : | Soak up with inert absorbent material (e.g. sand, silica gel,<br>acid binder, universal binder, sawdust).<br>Keep in suitable, closed containers for disposal. |

### SECTION 7. HANDLING AND STORAGE

If this concentration is exceeded, self-<br>contained breathing apparatus must be used. |
| Hand protection :            | Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.   |
| Eye protection :             | Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary.   |
| Skin and body protection :   | Choose body protection in relation to its type, to the concen-<br>tration and amount of dangerous substances, and to the spe-<br>cific work-place.  |
| Hygiene measures :           | Avoid contact with skin, eyes and clothing.<br>Wash hands before breaks and immediately after handling<br>the product.<br>Remove contaminated clothing and protective equipment<br>before entering eating areas.<br>Wash thoroughly after handling.                                     |

#### **Product:**

Remarks

#### Titanium dioxide (13463-67-7)

In lifetime inhalation studies of rats, airborne respirable-size titanium dioxide particles have shown to cause an increase in lung tumors at concentrations associated with substantial particle lung burdens and consequential pulmonary overload and inflammation. The potential for these adverse health effects appears to be closely related to the particle size and the amount of the exposed surface area that comes into contact with the lung. However, tests with other laboratory animals such as mice and hamsters, indicate that rats are significantly more susceptible to the pulmonary overload and inflammation that causes lung cancer. Epidemiological studies do not suggest an increased risk of cancer in humans from occupational exposure to titanium dioxide. Titanium dioxide has been characterized by IARC as possibly carcinogenic to humans (Group 2B) through inhalation (not ingestion). It has not been characterized as a potential carcinogen by either NTP or OSHA.
