CONCRETE & WATERPROOFING NSF/ANSI/CAN 61 CERTIFIED SOLUTIONS

ADMIXTURES AND WATERSTOPS FOR USE IN POTABLE WATER APPLICATIONS

BUILDING TRUST

SIKA IS YOUR RELIABLE PARTNER IN CONCRETE ADMIXTURES AND WATERPROOFING PRODUCTS

The stringent standards provided by the National Sanitation Foundation for potable water system components set minimum requirements for the control of adverse effects from products that come in contact with potable water. Structures such as water treatment plants, containment structures, other related systems and their components should be made with materials that meet this standard and are thereby considered safe to come in contact with potable water. Products that meet NSF/ANSI/CAN 61 better ensures the public will enjoy safe, clean water for years to come.
