# PRODUCT DATA SHEET

# Sika® FerroGard®-903

Penetrating, corrosion inhibiting, impregnation coating for hardened concrete

## PRODUCT DESCRIPTION

Sika® FerroGard®-903 is a corrosion inhibiting impregnation coating for hardened concrete surfaces. It is designed to penetrate the surface and then to diffuse in vapor or liquid form to the steel reinforcing bars embedded in the concrete. Sika® FerroGard®-903 forms a protective layer on the steel surface which inhibits corrosion caused by the presence of chlorides as well as by carbonation of concrete.

# How it works

Sika® FerroGard®-903 is a combination of amino alcohols, and organic and inorganic inhibitors that protects both the anodic and cathodic parts of the corrosion cell. This dual action effect dramatically delays the initiation of corrosion and greatly reduces the overall corrosion activity. Sika Sika® FerroGard®-903 protects the embedded steel by depositing a physical barrier in the form of a protective layer on the surface of the steel reinforcement. This barrier inhibits corrosion of the steel.

# **USES**

Sika® FerroGard®-903 is recommended for all steel-reinforced, prestressed, precast, post tensioned or marine concrete. Use of Sika® FerroGard®-903:

- Steel-reinforced concrete, bridges and highways exposed to corrosive environments (deicing salts, weathering)
- Building facades and balconies
- Steel-reinforced concrete in or near a marine environment
- Parking garages
- Piers, piles, and concrete dock structures
- As part of Sika's system approach for buildings and civil

Product Data Sheet

**Sika® FerroGard®-903**October 2018, Version 01.01
020303040010000001

engineering structures

# **CHARACTERISTICS / ADVANTAGES**

Sika® FerroGard®-903 offers owners, specifiers, port authorities, DOTs, and engineers, a new technology in corrosion inhibition that can easily be applied to the surface of existing concrete to extend the service life of any reinforced concrete structure.

- Protects against the harmful effects of corrosion by penetrating the surface of even the most dense concrete and diffusing to the steel to inhibit corrosion.
- Enhances the durability of reinforced concrete.
- Does not require concrete removal.
- Environmentally sound.
- Does not contain calcium nitrite.
- Easily applied by either spray or roller to all existing reinforced concrete.
- Can be applied to reinforced concrete that already exhibits corrosion.
- Adds additional benefits when used prior to protective coatings in concrete restoration systems.
- Water based for easy handling and application.
- Not a vapor barrier; allows vapor diffusion.
- FerroGard has been proven effective in both laboratory (ASTM G109/Cracked Beams) and field analysis.
- ANSI/NSF Standard 61 potable water approved

# PRODUCT INFORMATION

Packaging	5 gallon pails with spout, 55 gallon drums.
Appearance / Color	Pale Yellow
Shelf Life	18 months minimum in original, unopened container
Storage Conditions	Store at 40–95 °F (4–35 °C). Protect from freezing. If frozen, discard.
Density	1.13 (9.4 lbs./gal.)
pH-Value	11 (±1)
Viscosity	15 cps

# **TECHNICAL INFORMATION**

# **APPLICATION INFORMATION**

#### Coverage

For normal concrete, application is 200 ft.²/gal. each coat. A minimum of two coats is always recommended. For dense concrete, application may exceed 300 ft.2/gal. Therefore, more than two coats may be required to achieve the **total application rate: 100 ft.²/gal.** 

# **APPLICATION INSTRUCTIONS**

#### **SURFACE PREPARATION**

Before applying Sika® FerroGard®-903 be sure the

Product Data Sheet Sika® FerroGard®-903 October 2018, Version 01.01 020303040010000001

surface is clean and sound. Remove all dirt, dust, oil, grease, efflorescence or existing coatings from concrete surface by steam cleaning, waterblasting or slightly sandblasting. Allow concrete surface to dry prior to application of Sika® FerroGard®-903. The dryer the surface the better the penetration and effectiveness.

Sika® FerroGard®-903 is applied by roller, brush or spray

on concrete surfaces. When spraying, use a conventional

#### **APPLICATION**

airless spray system or hand-pressure equipment. A minimum of two coats is always recommended. Dense substrates may require more coats. Waiting time between coats of Sika® FerroGard®-903 is at least 1 hour. Allow a minimum of one day to allow Sika FerroGard 903 to dry and penetrate. When Sika® FerroGard®-903 is used prior to the application of a repair mortar, concrete overlay, protective coating, Sikafloor system or any other application, care must be taken to remove any residue remaining on the surface from the application of Sika® FerroGard®-903. Clean the substrate in such a manner (i.e. push the water in one direction away and off from the surface to be overcoated) to completely remove any residue. Horizontal surfaces require pressure washing (2,000 psi minimum) to remove the residue. Vertical surfaces may be rinsed with water or pressure washed. The use of Sika Armatec 110 EpoCem as a bonding agent prior to the application of repair mortars or concrete overlays is suggested. Drying times depend on environmental conditions, absorbency of the substrate and maximum recommended moisture content for the subsequently applied system.

# **LIMITATIONS**

- Minimum ambient and substrate temperatures 35 °F.
- Do not apply when temperature is expected to fall below 35 °F within 12 hours.
- If the applied surfaces will be submerged after the application of Sika® FerroGard®-903, a waterproofing coating must be applied prior to submersion.
- Substrate should be as dry as possible prior to the application.
- Protect glass, wood, brick, galvanized steel, copper and exposed aluminum during the application.
- Maximum chloride content of concrete structures intended to be treated with Sika® FerroGard®-903 is 6 lbs./y³ (measured at the level of the reinforcing steel).
   For levels up to 10 lbs./y³, consult technical service.
