

CONCRETE

SikaColor[®]-400 Opaque

- Solid color reactive concrete stain
- Etches surface of concrete eliminating a surface preparation step
- Excellent UV resistance
- Low VOC-content, low odor
- Excellent abrasion resistance and durability

BUILDING TRUST

SikaColor®-400 Opaque

SELF-ETCHING SOLID CONCRETE STAIN

THE GO-TO PRODUCT FOR ALL SKILL LEVELS

SikaColor®-400 Opaque is a reactive acrylic solid color concrete stain that provides excellent physical properties intended to stain concrete or cement-based material.

EASE OF PREPARATION AND APPLICATION

With its unique ability to etch concrete surfaces, it simply requires the concrete surface to be clean, dry, and free of foreign contaminants. Eliminating the need for acid etching and preventing potential runoff of hydrochloric acid into soil and drainage systems. During application, SikaColor®-400 Opaque etches the surface of concrete substrates, allowing the stain to penetrate the substrate, resulting in superior adhesion and lessen the potential for delamination.

THE ADVANTAGES ARE ENDLESS

- Solid color reactive concrete stain
- Excellent UV resistance
- Low VOC-content, low odor
- Low sheen
- Soap and water clean up
- Moisture tolerant
- Good de-icing salt resistance
- Water vapor permeable

TYPICAL APPLICATIONS:

- Uncolored, integrally colored, and stamped concrete surfaces
- Residential driveways, patios, porches, garage floors, retaining walls, and sidewalks
- Commercial hardscapes, walkways, vestibules, stairways, and entryways
