**Subject: Sarnacol® 2175 Membrane Adhesive – FM Approvals**

**22-01**

Sika Corporation – Roofing has achieved FM Approvals for Sarnafil® and Sikaplan® adhered roofing assemblies using Sarnacol® 2175 Membrane Adhesive with Sarnafil and Sikaplan bareback membranes. The FM rated assemblies will be posted in RoofNav shortly.

Sarnacol 2175 is a spray applied canister adhesive that has gained popularity because of its fast application and minimal clean up.

Sarnacol 2175 is sprayed onto the substrate and the membrane surface with a 50% overlap. The adhesive dries to touch within minutes and is not tacky when dry. Once the adhesive is dry, the membrane is applied to the substrate within 30 minutes and rolled into place.

Please refer to the Sarnacol 2175 Product Data Sheet for product and application information.

Sarnacol 2175 is not for use with feltback membranes.
