Sika® ViscoFlow®-585

Multi-Range Water Reducing & Rheology Enhancing Admixture

PRODUCT FEATURES

Advanced Clay Mitigation Technology

- Reduces negative effects of clay-contaminated and variable aggregates
- Maintains admixture efficiency without excessive adsorption onto clay particles

Enhanced Concrete Rheology

- Improves concrete flow characteristics while maintaining the desired slump or spread.
- Reduces yield stress and plastic viscosity, allowing concrete to move more easily

PERFORMANCE BENEFITS

- Improved consistency by reducing impact of material variability
- Enables maximum usage of locally available aggregate sources
- Easier pumping through long distances & congested reinforcement
- Improved placing & finishing operations for concrete
