# Sikalastic® RoofPro

SINGLE COMPONENT, NO MIX, FLUID APPLIED ROOFING & WATERPROOFING MEMBRANE SYSTEM

Single ply roofs come with many advantages however one short coming is the treatment of flashing details. When new single ply roofs are installed even planned details and roof components can be difficult to properly flash and keep watertight. Moreover, unexpected details can arise causing project delays while more flashing pieces are delivered or while custom flashings are manufactured.

Why not consider a liquid solution that requires far less planning and no custom pieces? Liquid-applied penetration and transition details easily conform around even the most complicated roof applications with little to no waste! When built into project specifications, Sikalastic® RoofPro liquid-applied roofing membranes provide a new, fully reinforced, fully adhered, 20-year roof component that ties directly into the specified Single ply membrane.

Sikalastic RoofPro for recovers or repairs is an excellent choice for existing smooth and granulated Mod-Bit, EPDM, TPO PVC and Hypalon roofs. Contact your local Sika LAM RoofPro Sales Rep if you think your roof could be a recover application.
