

# Sikagard® CRV 20

## NOVOLAC VINYL ESTER RESIN COATINGS

### CHEMICAL RESISTANT COATING

Sikagard® CRV 20 is designed to be used as a coating wherever chemical resistance is required on concrete or steel substrates. Sikagard CRV 20 is the protective component of a two part system that includes Sikagard® WDE Primer, an epoxy primer that provides excellent adhesion to dry or damp concrete and good chemical resistance.

Sikagard CRV 20 is derived from a modified Novolac Vinyl Ester polymer resin that provides a durable, long-lasting surface. It protects vertical and horizontal surfaces with a high resistance to a variety of solvents, acids and oxidizing substances along with excellent dry heat resistance up to 284 degrees Fahrenheit or 140 degrees Celsius.

# Sikagard® CRV 20

## Institutional & Industrial Flooring

### Tough Performance. Unlimited Versatility

Sikagard CRV 20 can be applied as a smooth, chemically-resistant coating on concrete or steel. However, it can also be applied as a broadcast, textured floor system that provides a slip-resistant, durable wearing surface for use in high traffic pedestrian areas where aggressive chemicals are in use. Sikagard CRV 20 protects containment tanks, machine bases, and plant floors or walls that are exposed to aggressive chemicals. Further, Sikagard CRV 20 can prevent ground water contamination resulting from uncontained chemical spills.

### Flexibility and Durability

Because Sikagard CRV 20 can be applied either as a smooth, coating system or as a broadcast, textured build-up system incorporating aggregates it is suitable for an expansive variety of horizontal and vertical surfaces that require high levels of chemical resistance. Both systems also exhibit excellent abrasion, impact and fatigue resistance while providing long-lasting wear and protection for concrete and steel surfaces.

### Typical Applications

- Secondary Containment Tanks
- Pedestrian Walkways
- Floor Coatings
- Wall Protection
- Chemical Storage Areas
- Loading Docks
