

PRODUCT DATA SHEET

SikaBond®-T100

ALL-IN-ONE HYBRID URETHANE ADHESIVE, MOISTURE VAPOR AND SOUND REDUCTION MEMBRANE

PRODUCT DESCRIPTION

SikaBond®-T100 is a one component, zero VOC, permanently elastic, super strong, very low permeability, moisture-cure, all-in-one hybrid polyurethane adhesive that offers unlimited moisture protection, crack bridging and sound reduction for full surface wood floor bonding.

USES

SikaBond®-T100 may be used for solid and engineered wood floors (strips, longstrips, planks, panels, boards), mosaic parquet, industrial parquet, wood paving (residential) as well as chip boards and plywood. Once cured, SikaBond®-T100 will generate a super strong bond to a variety of substrates for glue down installations and at the same time form a membrane which reduces moisture vapor transmission from the subfloor and sound reduction membrane.

CHARACTERISTICS / ADVANTAGES

- 150% Elongation
- Bonds up to 3/4" solid and engineered wood
- Easily cleans off prefinished floors before and after cure
- Unlimited subfloor moisture vapor protection
- No moisture testing required - a dry to touch substrate is the only requirement

PRODUCT INFORMATION

Chemical Base	Hybrid Polymer
Packaging	4 gal. (15.14 L)
Color	Off - white

- ZERO VOC
- Contains no water, solvent or isocyanates
- Low moisture vapor permeability
- Sound protection - meets local IIC and STC requirements
- Crack Bridging
- Very easy to spread
- Low odor
- Advanced Hybrid Technology
- Excellent green grab
- High elongation
- Permanently elastic - allows planks to expand and contract without damage to the adhesive
- Tenacious Bonding

ENVIRONMENTAL INFORMATION

LEED® EQc 4.1 (100 g/L limit)	SCAQMD, Rule 1168 (100 g/L limit)	BAAQMD, Reg. 8, Rule 51 (120 g/L limit)
passes	passes	passes

APPROVALS / STANDARDS

Independently tested to - STC 62 (ASTM E-90) and IIC = 67 (ASTM E-492) when used as a sound control membrane at the specified coverage.

Shelf Life	12 months from date of production if stored in undamaged original sealed containers
Storage Conditions	Keep in dry conditions and protected from direct sunlight at temperatures between 50 °F and 77 °F (10–25 °C)
Density	1.64 kg/L Water Vapor Permeability is < 4 g/mmHg, 24h, m2 according to ASTM E-96 (< 4 Perms)
Consistency	Easy to spread

TECHNICAL INFORMATION

Shore A Hardness	45–50	(7 days at 74 °F (24 °C) and 50 % R.H.)
Tensile Strength	150 psi (1.03 MPa)	(7 days at 74 °F (24 °C) and 50 % R.H.)
Elongation at Break	150 %	(7 days at 74 °F (24 °C) and 50 % R.H.)
Shear Strength	2.0 N/mm ² , 1 mm adhesive thickness	(74 °F (24 °C) and 50 % R.H.)
Service Temperature	-40–150 °F (-40–65 °C)	

APPLICATION INFORMATION

Coverage

FOR ALL-IN-ONE MOISTURE AND SOUND CONTROL			
Flooring Type		Trowel	Coverage
Solid or Engineered	Solid: Max Thickness: 3/4" Max Width: 8"	1/4" x 1/4" V-Notch 	30-35 sq.ft. per gal.
	Eng: Max Thickness: 3/4" Max Width: Unlimited	SCMB: 1/8" x 5/32" x 3/16" 	30-35 sq.ft. per gal.
For All-In-One Coverage: 100% adhesive coverage to concrete and 100% adhesive transfer to back of board is required			
FOR USE AS ADHESIVE ONLY			
Flooring Type		Trowel	Coverage
Solid	Max Thickness: 3/4" Max Width: 8"	PS: 3/16" x 3/16" x 3/16" Flat V-notch 	45-50 sq.ft. per gal.
Engineered	Thickness: 3/4" Max Width: Unlimited		
FOR USE WITH UNDERLAYMENT			
Flooring Type		Trowel	Coverage
Cork or rubber underlayment		1/8" x 1/8" Square notch* 	80 sq.ft. per gal.

* Recommended trowel size for 3.2mm material

- Coverage must be monitored to ensure accuracy of application. Trowel angle may prevent proper coverage.
- Applicator is responsible for periodic inspection of the trowel to check for excessive wear. Worn trowels must be replaced immediately.
- In case of uneven substrates, it may be necessary to use a notched trowel with bigger notches (avert hollow sections).
- Coverage must be monitored to ensure accuracy of application. Trowel angle may prevent proper coverage.
- Trowel size is recommended to obtain proper coverage larger sizes are acceptable. Excessive amounts of adhesive may cause wood flooring to slide while placing check coverage during installation.

- P5 trowels should be used at 90° angle, SC+MB trowel or 1/4 in. (6.3 mm) x 1/4 in. (6.3 mm) V-notch at 45° angle to subfloor to get stated coverages.
- Substrate Quality: Structurally sound, clean, dry, homogeneous, even, free from grease, dust and loose particles, paint, laitance, and other poorly adhering particles must be removed.
- The P5 and SC+MB trowel are available from Sika.

Ambient Air Temperature	Room temperature between 50 °F (15 °C) and 90 °F (35 °C). For ambient temperatures standard construction guidelines should be followed. Follow all wood floor manufacturers' acclimation and room temperature requirements.	
Relative Air Humidity	Between 40 % and 70 % during installation is best for adhesive. See wood floor manufacturer for wood requirements.	
Substrate Temperature	During laying and until SikaBond®-T100 has fully cured, substrate temperature should be greater than 60 °F (15 °C) and in the case of radiant floor heating, less than 70 °F (20 °C). For substrate temperatures, standard construction guidelines should be followed.	
Substrate Moisture Content	<p>For use as an adhesive only: SikaBond®-T100 is not affected by moisture or vapor transmission. For protection of the wood, follow the wood floor manufacturer's requirements for subfloor moisture. If substrate is not acceptable per wood manufacturer's requirements, use SikaBond®-T100 at recommended coverage rate for moisture protection or use Sika® MB.</p> <p>For use as an adhesive and membrane: Concrete must be dry to touch. Inspect for any wetness at base of drywall or visible signs of moisture on concrete. Concrete and cement-based underlayments must be fully cured and free of any hydrostatic and/or moisture problems.</p>	
Cure Time	Light Traffic at 8 hours Floor can be sanded at 18 hours	
Curing Rate	3 mm/24 hours at 74 °F 50 % R.H. 7 mm/ 7 days at 74 °F 50 % R.H.	
Skin Time / Laying Time	60 min	74 °F 50 % R.H.

APPLICATION INSTRUCTIONS

SUBSTRATE PREPARATION

SikaBond®-T100 can be used without priming on properly prepared, structurally sound concrete, cement floors, chipboards, ceramic tiles, plywood and hardwood. Sika® recommends the use of Sika® MB over any dry, gypsum based subflooring to enhance surface strength. Maximum acceptable floor variation is 3/16 in. (4.7 mm) over 10 feet (3 m). Preparation is a critical step in the installation process and will ensure a successful long term tenacious bond. All concrete, cement screed and gypsum based subfloors must be structurally sound, clean, dry, smooth, free of voids, projections, loose materials, oil, grease, sealers and other surface contaminants. Remove laitance or weak areas mechanically. For application over ceramic tiles it is necessary to grind tile surfaces and clean thoroughly with an industrial vacuum. For substrates with old well bonded adhesive or adhesive residue use Sika® MB – see Product Data Sheet for installation instructions and proper details. If surface contains asphalt (cutback) adhesive follow the Resilient

Floor Covering Institute "Recommended Work Practices" for removal. When the asphalt (cutback) adhesive is sufficiently removed use Sika® MB to help promote adhesion to the subfloor or use a Sika Level system over the cutback residue. SikaBond®-T100 will adhere to Sika® Level levelers and patches as well as most common patching/leveling compounds. For unknown substrates please contact Sika® Technical Services for best practices at 1-800-933-SIKA.

APPLICATION METHOD / TOOLS

Read and understand data sheet completely before beginning installation. Follow all industry standards, as well as hardwood and bamboo flooring manufacturer's recommendations for floor flatness, acclimation, design, layout, application, etc. of wood flooring material. If job-site conditions are outside of flooring manufacturer's recommendations, take necessary corrective actions as recommended by the floor manufacturer to address these issues. Whether the moisture content of substrate exceeds or is within the manufacturer's recommendations, to address current or possible future subfloor moisture, apply SikaBond®-T100 as directed. SikaBond®-T100 is ap-

plied to the properly prepared substrate directly from the pail and uniformly distributed by trowel as described on this Product Data Sheet. Press the wood floor elements firmly into the adhesive so that the wood floor underside is sufficiently wetted. The elements can then be joined together using a rubber hammer and an impact block and/ or rubber mallet. Many types of wood floors have to be tapped from the top. Leave gaps at room perimeters and at any floor wall partition to allow wood flooring to move naturally – follow recommended guidelines from wood floor manufacturer. Spacers should be used to ensure perimeter space is maintained. The wood flooring manufacturer's laying instructions, acclimation requirements, room humidity/environmental control requirements as well as standard construction rules must be observed.

Clean up

SikaBond®-T100 cleans easily off of most finishes on pre-finished flooring, even after cure. It is still easier to clean as you go while the adhesive is still wet. Clean with a soft non-abrasive towel as you work. After cure remove adhesive with a non-abrasive towel. Tools that will not damage the floor finish may also work. Clean all tools and equipment immediately after use before adhesive cures. Mineral spirits or other similar solvent can be used.

LIMITATIONS

- Wood size limitations can be found in coverage section
- P5 trowel or larger must be used with all solid woods and when applying over gypsum based sub floor (for use as an adhesive only)
- SC+MB or 1/4 in. (6.3 mm) x 1/4 in. (6.3 mm) trowel must be used for use as an adhesive and vapor retarder membrane. Follow the wood floor manufacturer's installation instructions.
- Periodically check coverage of adhesive during installation: 100 % substrate coverage and adhesive transfer is required to protect against damages from subfloor moisture.
- Minimum age of concrete before application is 21–28 days, depending on curing and drying conditions.
- Room temperatures should be between 50 °F (10 °C) and 90 °F (32 °C) during installation unless otherwise specified limitations by wood flooring manufacturer.
- Do not use on wet, contaminated or friable substrates.
- When needed, Sika® recommends the use of Sika® Level patching and levelling compounds for best results.
- Gypsum based sub-floors are very susceptible to excess moisture and will be degraded if exposed to excess moisture from below or above.
- Solid wood and bamboo flooring cannot be used below grade due to their lack of dimensional stability.
- Do not use in areas subject to hydrostatic head or in areas subject to secondary source of moisture.
- On-or below-grade substrates must have appropriate vapor barrier (< 6 mil, 0.15 mm) properly installed be-

low slab.

- Do not use over concrete with curing compounds, sealers or other surface treatments that could impact the adhesion.
- This adhesive will not prevent all possible moisture related or installation related issues such as improper acclimation of flooring, jobsite temperature and relative humidity, etc.
- This membrane reduces moisture vapor emissions that originate from below the membrane only.
- This membrane does NOT reduce issues originating from the ends, sides or top of flooring, i.e. puddles, water leaks, etc.
- Sub-floor should be level – do not use adhesive as a levelling agent.
- Cutback or other asphaltic based residue must be removed.
- Chemically treated woods (ammonia, wood stain, timber preservatives, etc.) and woods with high oil content must be tested for adhesion prior to application.
- Adhesive should be kept above 60 °F (15 °C) for best workability.
- Sufficient ambient moisture is necessary for proper curing.
- When bonding solid wood Sika recommends the use of straps to fully connect tongue and groove – especially when wood pieces are not perfectly straight – ensure starter rows are set and properly cured to handle tension from straps.
- Installations over radiant heat require that slab temperature be kept below 70 °F (21 °C) during installation and for 48 hours after installation – then raised slowly up to final desired temperature. Follow wood floor manufacturer's temperature guidelines.
- Do not expose SikaBond®-T100 to alcohol.

BASIS OF PRODUCT DATA

Results may differ based upon statistical variations depending upon mixing methods and equipment, temperature, application methods, test methods, actual site conditions and curing conditions.
