SYSTEM DATA SHEET
Sikalastic®-624 WP Waterproofing System

LIQUID APPLIED ALKALINE-RESISTANT SINGLE COMPONENT FULLY REINFORCED SYSTEM WITH FIBERGLASS OR POLYESTER REINFORCEMENT

PRODUCT DESCRIPTION
Sikalastic®-624 WP Waterproofing System combine a cold applied, aliphatic, single component, alkali resistant, moisture-triggered polyurethane resin with fiberglass mat or polyester fleece reinforcement to create a seamless membrane and flashing system. Typical applications include a separate wearing course (overlayment or overburden), but Sikalastic®-624 WP Waterproofing System is UV resistant without protection board and is therefore suitable for direct exposure waterproofing applications as well. System components are:

Sika® or Sikalastic® Primer: Select primer per substrate material in accordance with Priming Guide
Sikalastic®-624 WP: Resin used for all systems with Sika Reemat or Sika Fleece reinforcements
Sikalastic® Reemat Premium: Chopped strand fiberglass mat
Sika® Fleece 120, 140, 170: Non-woven, needle-punched polyester fleece in various weights

USES
Sikalastic®-624 WP Waterproofing System may only be used by experienced professionals.

- Sikalastic® waterproofing systems, including Sikalastic® Plaza Deck/PMA and Vegetated systems for both new construction and refurbishment
- Split-slab waterproofing - between slabs
- Vegetated deck waterproofing
- Plaza decks with concrete pavers, and asphalt or concrete paving stones in a sand bed
- Waterproofing under tile in a mortar bed
- Applications involving cementitious and asphalt pavement overlays
- Waterproofing around/beneath mechanical equipment

CHARACTERISTICS / ADVANTAGES
- Proven technology with over 30 year track record
- Single component - no mixing and ready to use
- Fully reinforced with highly conformable Sika® Reemat or Sika® Fleece
- Integrated flashings utilizing same resin and reinforcements
- Ideal for complex details and geometry or when accessibility is limited
- Moisture triggered chemistry that is rapidly weatherproof after application
- Highly elastic and crack bridging
- Seamless and fully adhered
- Vapor permeable
- UV resistant and non-yellowing
- Abrasion and chemical resistant
- Alkali resistant formulation
- Adheres to most common construction materials when suitable primer is used.

APPROVALS / STANDARDS
- Miami Dade County approved: NOA No.: 15-0113.01
- Meets ASTM E-108-00 Spread of Flame: Class A at slope of 1:12

#### Substrate Pre-Treatment

Refer to Priming Guide to select primer for properly evaluated and prepared substrate. Refer to separate primer Product Data Sheet for application methods, coverage rates, cure times and recoat windows. Always allow primer to cure thoroughly before applying detail or base resin layer.

* Consult Sika  
1 New cementitious substrates must be Portland based and be cured min. 28 days.  
2 The presence of volatiles may cause discoloration of Sikalastic® if not properly primed.  
3 Surface evaluation and field adhesion testing.  
4 Glazed tile consult Sika.  
5 Pressure treated lumber consult Sika.
Waiting Time / Overcoating

PRODUCT INFORMATION

Packaging

5 gal. (18.9 L) pails

Shelf Life

9 months in original, unopened and undamaged sealed containers

Storage Conditions

Store dry at 35–77 °F (2–25 °C). Condition material to 50–77 °F (10–25 °C) before using for ease of application

APPLICATION INSTRUCTIONS

SUBSTRATE PREPARATION

Substrate Evaluation

Concrete and cementitious substrates

New concrete shall be allowed to cure a minimum of 28 days. Concrete shall have a minimum compressive strength of 20.7 MPa (3000 psi) and exhibit a minimum tensile bond strength of 1.4 MPa (200 psi). time. Moist or sheet curing methods should be used, as opposed to the use of curing compounds, which may interfere with the bond of the membrane. Inspect the concrete, including upstands, and all areas should be hammer tested. Concrete must be suitably finished, preferably by wood float or steel pan. A power float finish is acceptable where the surface is prepared to avoid laitance (a tamped finish is not acceptable). The surface finish must be uniform and free from defects such as laitance, voids or honeycombing.

Gypsum and Cement based sheathing

Sheathing boards shall be clean, dry and dust free, and shall be properly secured to the structure. Loose, damaged, or contaminated boards shall be removed and replaced.

Brick and stone

Mortar joints must be sound and preferably flush pointed.

Asphalt

Asphalt contains volatiles which can cause bleeding and slight non-detrimental staining. The asphalt must be carefully assessed for moisture and/or air entrapment, grade and surface finish.

Bituminous felt

Ensure that bituminous felt is firmly adhered or mechanically fixed to the substrate. Bituminous felt shall not contain badly degraded areas.

Bituminous coatings

Bituminous coatings shall not have sticky or mobile surfaces, volatile mastic coatings, or old coal tar coatings.

Metals

Metals must be in sound condition.

Wooden substrates

Plywood and timber based roof decks must be in good condition, firmly adhered and mechanically fixed. All plywood shall be identified as conforming to PS 1 for construction and industrial plywood by grade, APA (American Plywood Association) trademark, or equivalent. For maximum smoothness, EXT Type APA, Grade A-C should be used, and the “A” side should be positioned to receive the Sikalastic® resin. Plywood decks to receive resin directly shall be at least 1/2" thick and attached and supported according to APA guidelines, using only non-rusting screw, spiral or coated nail type fasteners. A good practice would be to recess or counter sink fasteners 1/8 to 1/4" and fill with Sikaflex® sealant. Suitable edge support to prevent differential deflection between panels shall be provided. Panel edges shall be tongue and groove or supported on solid blocking. Space panels
1/8 to 3/16” at panel ends.

**Paints and coatings**
Ensure the existing material is sound and firmly adhered.

**Existing Sikalastic® System**
The existing Sikalastic® System shall be soundly adhered to the substrate.

**Surface Preparation**

**Concrete and cementitious substrates**
Cementitious or mineral based substrates must be prepared mechanically using abrasive blast cleaning or scarifying equipment to remove cement laitance and to achieve an open textured surface (CSP 3-5 per ICRI guidelines). Loose friable material and weak concrete must be completely removed and surface defects such as blowholes and voids must be fully exposed. The amount of embedment coat required may increase over rough or highly porous surfaces. Repairs to the substrate, filling of joints, blowholes/voids and surface levelling must be carried out. Consult Sika for product recommendations based on project requirements. High spots must be removed by grinding or similar method. Outgassing is a naturally occurring phenomenon of concrete that can produce pinholes in liquid applied materials. The concrete must be carefully assessed for moisture content, air entrapment, and surface finish prior to any roofing work. Particular requirements for priming must also be considered. Installing the primer and membrane either when the concrete temperature is falling or stable can reduce outgassing. It is generally beneficial, therefore, to apply the primer and embedment coat in the late afternoon or evening.

**Gypsum and Cement based sheathing**
Sheathing boards shall be clean, dry and dust free. Secure loose boards if in sound condition. Damaged or contaminated boards shall be removed and replaced.

**Brick and stone**
Power wash and use biodegradable non-sudsing detergent with clean water rinse as required.

**Asphalt**
Power wash and use biodegradable non-sudsing detergent with clean water rinse as required. All major cracks should be sealed to allow continuity of the Sikalastic® system.

**Bituminous felt**
Power wash and use biodegradable non-sudsing detergent with clean water rinse as required. Treat blisters by star cutting and removing any underlying water. Allow to dry and re-adhere using suitable adhesive.

**Bituminous coatings**
Remove any loose or degraded coatings.

**Metals**
Ferrous metals should be thoroughly cleaned by grinding or blast cleaning prior to priming (SSPC-SP3 to near-white metal). Non-ferrous metals are prepared by removing any deposits of dust and oxidation and abrading to bright metal. Wire brushing can be used for soft metal such as lead. The surface must be clean and free from grease which, if present, must be removed with a solvent wipe or wash with detergent, rinse and dry.

**Wooden substrates**
Timber and timber based roof decks require additional reinforcement such as the installation of plywood, approved insulation or cover board. Small timber protrusions and suitable decks may be treated directly, provided that the timber is of exterior quality, e.g. plywood. Fill joints flush with Sikaflex® sealant.

**Paints/Coatings**
Remove any loose or degraded coatings. Ensure the surface is clean and free from grease.

**Sikaplan®/Sarnafil® membranes**
Clean membranes with Sarna® Cleaner (PVC membranes) and Sarnafil® T Clean (TPO membranes) prior to application of primer.

**Existing Sikalastic® Systems**
Clean the membrane using a water jet at approximately 140 bar (2000 psi) and biodegradable non-sudsing detergent with clean water rinse. Allow to dry.

**MIXING**
No mixing necessary

**APPLICATION**

**Detailing**

**Non-structural cracks up to 1/16”**- Detail application not necessary. Apply embedment/base resin layer per below.

**Non-structural cracks between 1/16 inch and 1/4 inch** - Rout and seal with Sikaflex® sealant. Apply 40-45 mil resin layer embedded with 3 inch Sika® Flexitape Heavy centered over crack. Alternatively Sika® Joint Tape SA can be applied. Apply embedment/base resin layer per below.

**Cracks and joints between 1/4 " and 1"** - Rout and seal with Sikaflex® sealant. Apply bond breaker tape sufficient to span width of crack or joint followed by 40-45 mil resin layer embedded with 6” Sika® Flexitape Heavy centered over crack or joint. Apply embedment/base resin layer by terminating Sika® Reemat or Sika® Fleece at edges of crack or joint overlapping Sika® Flexitape Heavy a minimum of 2 inches on both sides.

**Joints greater than 1”** - Treat as expansion joint. Consult...
Metal seams and plywood/coverboard joints - Apply 40–45 mil resin layer embedded with 3 or 6” Sika® Flexitape Heavy centered over seam. Alternatively Sika® Joint Tape SA can be applied. Apply embedment resin layer per below.

Transitions between dissimilar materials - Apply 40–45 mil resin layer embedded with Sika® Flexitape Heavy centered over edge. Apply embedment resin layer per below.

Embedment/Base Resin Layer with Sika® Reemat Reinforcement
Mixing not required. Apply Sikalastic®-624 WP Waterproofing System Guide at the coverage rate in the AR System Guide with a 1/2” nap phenolic resin core roller. Material can also be squeegee or spray applied, in which case it should be backrolled prior to embedding Sika® Reemat. Place Sika® Reemat in wet base resin layer overlapping seams a minimum of 2” (place frayed edge over cut edge of roll) and apply wet roller to topside to saturate completely. After approximately 5 minutes the binder will begin to dissolve allowing the fiber strands to conform to irregular surfaces. Do not over work once the fibers have conformed to the substrate. Allow to cure 12 hours at 70 °F and 50 % R.H. or until tack free before top resin layer. Keep clean and dry and apply top resin layer within 7 days. If window is exceeded clean with non-sudsing detergent and clean water rinse, and allow to dry prior to application of Sika® Reactivation Primer.

Top Resin Layer with Sika® Reemat Reinforcement
Mixing not required. Apply Sikalastic®-624 WP-Waterproofing at the coverage rate in the RoofPro System Guide with a 1/2” nap phenolic resin core roller. Material can also be squeegee or spray applied, in which case it should also be backrolled. In the case of RoofPro 25 allow the first top resin layer to cure 12 hours at 70 °F and 50 % R.H. or until tack free before applying second top resin layer. On top of the complete RoofPro system additional resin layers may be applied with aggregate for slip resistance - consult Sika for recommendations. Keep clean and dry and apply additional resin layers within 7 days. If window is exceeded clean with non-sudsing detergent and clean water rinse, and allow to dry prior to application of Sika® Reactivation Primer.

Wet on Wet Application with Sika® Fleece Reinforcement
Mixing not required. To primed substrate apply two-thirds of the Sikalastic®-624 WP-Waterproofing specified in the WP System Guide with a 1/2” nap phenolic resin core roller. Immediately place specified Sika® Fleece into wet resin overlapping seams a minimum of 3” along the edge and 6” end-to-end. Apply wet roller to topside with light pressure to saturate fleece from bottom and ensure air pockets are completely removed. Immediately apply all of remaining one-third of Sikalastic®-624 WP-Waterproofing resin specified in the WP System Guide to ensure even and complete fleece saturation from topside and uniform texture.

Overburden Application
Sikalastic®-624 WP-Waterproofing membrane may be used as the waterproofing layer under a wide range of overburden materials. Depending on the overburden type, different surfacing, drainage, and protection layers may be required.

Protected Membrane Assemblies
Install Sika® 420 Drain Mat over the Sikalastic®-624 WP-Waterproofing membrane prior to the installation of the extruded polystyrene insulation layer. No aggregated membrane surfacing is required.

Concrete Pavers with Pedestal Supports
Install Sika® 420 Drain Mat over the Sikalastic®-624 WP-Waterproofing membrane to provide additional protection of the membrane under the pedestal supports.

Tile Adhered in a Cementitious Thin-Set Adhesive
A full aggregate broadcast surfacing is required to provide an adhesion key for the tile adhesive. Apply a supplemental 15 wet mils of Sikalastic®-624 WP-Waterproofing resin, followed by a full broadcast of 16–30 or 12–20 kiln-dried sand to refusal, typically 40–50 lbs./100 sf. Remove all loose sand once resin has cured. Do not seal the aggregated surface.

Tile in a Cementitious Setting Bed
Install Sika® 720 Drain Mat over the Sikalastic®-624 WP-Waterproofing membrane prior to installation of the cementitious setting bed, which is typically 1–1/2”-3” in thickness, and which may be sloped to create positive drainage. Secure the Sika® 720 Drain Mat to the Sikalastic®-624 WP-Waterproofing membrane as required to prevent shifting during setting bed installation by spot-adhering with Sikaflex® 11 FC. Bi-level drains should be installed to provide drainage capability at the membrane level as well as drainage of the finished surface.

Concrete/Asphalt Pavers in a Sand Setting Bed
Install Sika® 420 Drain Mat over the Sikalastic®-624 WP-Waterproofing membrane prior to installation of the sand setting bed, which is typically either graded silica sand or a mix of sand and asphalt. Secure the Sika® 420 Drain Mat to the Sikalastic®-624 WP-Waterproofing membrane as required to prevent shifting during setting bed installation by spot-adhering with Sikaflex® 11 FC. Bi-level drains should be installed to provide drainage capability at the membrane level as well as drainage of the finished surface.

Vegetation and Growing Media/Soil
The selection of a vegetated overburden assembly is typically project specific and specified by a qualified design professional. At a minimum, install Sika® GRS Drain Mat over the Sikalastic®-624 WP-Waterproofing membrane.
prior to application of all other overburden components. Secure the Sika® GRS Drain Mat to the Sikalastic®-624-WP-Waterproofing membrane as required to prevent shifting during vegetative overburden assembly components by spot-adhering with Sikaflex® 11 FC. Bi-level drains should be installed to provide drainage capability at the membrane level as well as drainage at grade level.

Concrete Pavement
Install Sika® 1000 Drain Mat over the Sikalastic®-624-WP-Waterproofing membrane prior to application of the fresh concrete. Secure the Sika® 1000 Drain Mat to the Sikalastic®-624-WP-Waterproofing membrane as required to prevent shifting during concrete placement by spot-adhering with Sikaflex® 11 FC. Bi-level drains should be installed to provide drainage capability at the membrane level as well as drainage of the finished surface.

Asphalt Pavement
Install Sika® 1000 Drain Mat over the Sikalastic®-624-WP-Waterproofing membrane, followed by the installation of a ¾” thick asphalt protection board. Overlap the protection board at all end and side laps by 2” min. Secure the Sika® 1000 Drain Mat and asphalt protection board as required to prevent shifting during asphalt pavement placement by spot-adhering with Sikaflex® 11 FC. Bi-level drains should be installed to provide drainage capability at the membrane level as well as drainage of the finished surface.

CLEANING OF TOOLS
Clean all tools and application equipment with appropriate solvent immediately after use. Hardenened and/or cured material can only be removed mechanically.

LIMITATIONS
- Minimum age of concrete must be 28 days depending on curing and drying conditions.
- Do not thin with solvents.
- Do not store materials outdoors exposed to sunlight and moisture for prolonged periods.
- Do not apply to substrate surfaces where moisture vapor transmission will occur during application and cure. This condition may be checked using ASTM D-4263 (Polyethylene Sheet method).
- Substrate must be dry prior to application. Do not apply to a frosted, wet or damp surface.
- Allow sufficient time for the substrate to dry after rain or inclement weather, as there is the potential for bonding problems.
- On substrates likely to exhibit outgassing apply during falling ambient and substrate temperature.
- If applied during rising temperature pinholing may occur.
- Use sunglasses with UV filter when applying highly reflective white resins.
- Do not use for indoor applications.
- Precautions should be taken to prevent vapors and/or odors from entering the building/structure, including but not limited to turning off and sealing air intake vents and throughwall air conditioners, and other means of vapor/odor ingress during application and cure.
- For areas with direct exposure to heavy or frequent foot traffic, an additional wear coat protection with slip resistant aggregate is required. Opening to traffic prior to cure may result in loss of aggregate or permanent staining and subsequent premature failure.
- Any repairs required to achieve a level surface must be performed prior to application (consult a Sika representative for guidance on various product solutions). Surface irregularities may reflect through the cured system.
- When applying over existing coatings or membranes compatibility and adhesion testing, and subsequent approval by Technical Services is required.
- Opening to traffic prior to cure may result in loss of aggregate or permanent staining and subsequent premature failure.
- On grade concrete decks should not be covered with Sikalastic® RoofPro membrane systems.
- Unvented metal pan, split/sandwich slab with encapsulated membrane and/or insulation, cinder fill decks, and lightweight insulating concrete overlays should not be covered with Sikalastic® RoofPro membrane systems without additional deck evaluation and subsequent approval by Technical Services.
- Do not subject to continuous immersion.
- Not recommended for use over ceramic tile.

BASIS OF PRODUCT DATA
Results may differ based upon statistical variations depending upon mixing methods and equipment, temperature, application methods, test methods, actual site conditions and curing conditions.

LOCAL RESTRICTIONS
Prior to each use of any Sika product, the user must always read and follow the warnings and instructions on the product’s most current Product Data Sheet, product label and Safety Data Sheet which are available online at http://usa.sika.com/ or by calling Sika’s Technical Service Department at 800.933.7452 nothing contained in any Sika materials relieves the user of the obligation to read and follow the warnings and instructions for each Sika product for each Sika product as set forth in the current Product Data Sheet, product label and Safety Data Sheet prior to product use.

ECOLOGY, HEALTH AND SAFETY
Keep container tightly closed. Keep out of reach of children. Not for internal consumption. For industrial use only. For professional use only. For further information
and advice regarding transportation, handling, storage and disposal of chemical products, users should refer to the actual Safety Data Sheets containing physical, ecological, toxicological and other safety related data. Read the current actual Safety Data Sheet before using the product. In case of emergency, call CHEMTREC at 1-800-424-9300, International 703-527-3887.

LEGAL NOTES

Prior to each use of any Sika product, the user must always read and follow the warnings and instructions on the product’s most current Product Data Sheet, product label and Safety Data Sheet which are available online at http://usa.sika.com/ or by calling Sika’s Technical Service Department at 800-933-7452. Nothing contained in any Sika materials relieves the user of the obligation to read and follow the warnings and instruction for each Sika product as set forth in the current Product Data Sheet, product label and Safety Data Sheet prior to product use. SIKA warrants this product for one year from date of installation to be free from manufacturing defects and to meet the technical properties on the current Product Data Sheet if used as directed within shelf life. User determines suitability of product for intended use and assumes all risks. Buyer’s sole remedy shall be limited to the purchase price or replacement of product exclusive of labor or cost of labor. No other warranties express or implied shall apply including any warranty of merchantability or fitness for a particular purpose. Sika shall not be liable under any legal theory for special or consequential damages. Sika shall not be responsible for the use of this product in a manner to infringe on any patent or any other intellectual property rights held by others. Sale of Sika products are subject to Sika’s terms and conditions of sale available at http://usa.sika.com/ or by calling 201-933-8800.
