# Sika CarboDur®
## Carbon fiber laminate for structural strengthening

### Description
Sika CarboDur is a pultruded carbon fiber reinforced polymer (CFRP) laminate designed for strengthening concrete, timber and masonry structures. Sika CarboDur is bonded onto the structure as external reinforcement using Sikadur 30 epoxy resin as the adhesive.

### Where to Use
- **Load increases**
  - Increased live loads in warehouses
  - Increased traffic volumes on bridges
  - Installation of heavy machinery in industrial buildings
  - Vibrating structures
  - Changes of building utilization
- **Damage to structural parts**
  - Aging of construction materials
  - Steel reinforcement corrosion
  - Vehicle impact
  - Fire
- **Serviceability improvements**
  - Decrease in deformation
  - Stress reduction in steel reinforcement
  - Crack width reduction
- **Change in structural system**
  - Removal of walls or columns
  - Removal of slab sections for openings
- **Design or construction defects**
  - Insufficient reinforcements
  - Insufficient structural depth

### Advantages
- Very high strength
- Lightweight
- Non-corrosive
- Unlimited lengths
- Minimal preparation of laminates
- Very easy to install, especially overhead
- High modulus of elasticity
- Outstanding fatigue resistance
- Alkali resistant
- Simple laminate intersections or crossings

### Typical Data
Results may differ based upon statistical variations depending upon mixing methods and equipment, temperature, application methods, test methods, actual site conditions and curing conditions.

Covering

Coverage of Sikadur 30 epoxy resin with CarboDur: Type S 512: approx. 50 LF/gallon. Type S 812: approx. 32 LF/gallon. Type S 1012: approx. 22 LF/gallon.

Packaging

Available in any length up to 250 m (820 ft.). Type S 512 width 50 mm (approx. 2”). Type S 812 width 80 mm (approx. 3”). Type S 1012 width 100 mm (approx. 4”).

How to Use

Surface Preparation

Surface must be clean and sound. It may be dry or damp, but free of standing water and frost. Remove rust, dirt, latex, grease, curing compounds, impregnations, waxes, foreign particles, disintegrated materials and other bond inhibiting materials from the surface. Existing uneven surfaces must be filled with an appropriate repair mortar (e.g., mixed Sikadur 30 epoxy with the addition of 1 part oven-dried sand). The adhesive strength of the concrete must be verified after surface preparation by random pull-off testing (ACI 503R) at the discretion of the engineer. Minimum tensile strength, 200 psi (1.4 MPa) with concrete substrate failure.

Surface Levelness/Irregularities: Maximum allowable deviation in 6 ft. shall be limited to 1/4” (6 mm) but no greater than 1/8” (3 mm) per foot. Any sharp edges (i.e., fins, form-marks, etc.) must be ground smooth and flush.

Preparation Work: Concrete - Blast clean, shotblast or use other approved mechanical means to provide an open roughened texture.

CarboDur - Wipe clean with appropriate cleaner (e.g., MEK).

Cutting the CarboDur Laminate:

Preferred: CarboDur laminates should be cut with tools using a “shearing” force (e.g., guillotine or heavy duty shears). Care must be taken to support both sides of the CarboDur laminate to avoid splintering.

Alternate: A hack saw or other abrasive cutting method may be used. However, extra care must be taken to support the CarboDur laminate on both sides to avoid splintering. In addition, extra care must be taken to avoid exposure to carbon dust (see Caution).

Mixing

Consult Sikadur 30 technical data sheet for information on epoxy resin.

Application

Apply the neat mixed Sikadur 30 epoxy onto the concrete with a trowel or spatula to a nominal thickness of 1/16” (1.5 mm). Apply the mixed Sikadur 30 epoxy onto the CarboDur laminate with a “roof-shaped” spatula to a nominal thickness of 1/16” (1.5 mm). Within the open time of the epoxy, depending on the temperature, place the CarboDur laminate onto the concrete surface. Using a hard rubber roller, press the laminate into the epoxy resin until the adhesive is forced out on both sides. Remove excess adhesive. Glue line should not exceed 1/8 inch (3 mm). The external reinforcement must not be disturbed for a minimum of 24 hours. The epoxy will reach its design strength after 7 days.

Limitations

Design calculations must be made and certified by an independent licensed professional engineer. Design guidelines are available from Sika Corporation.

Caution

CarboDur strips are non-reactive and fully cured. They do not require a material safety data sheet. However, caution must be used when handling the CFRP laminates since a fine ‘carbon dust’ may be present on the strips. Gloves must therefore be worn to protect against skin irritation.

Caution must also be used when cutting CarboDur laminates to protect against airborne carbon dust generated by the cutting procedure. Use of an appropriate, properly fitted NIOSH approved respirator is recommended.
