## ROOFPOINT™ REGISTERED PROJECT

### GENERAL MOTORS CUSTOMER CARE AND AFTERSALES BUILDING

*Lansing, Michigan*

#### PROJECT DESCRIPTION

The re-roofing of this 475,000 square foot facility was a real-world demonstration of “closed loop” recycling and was the largest vinyl roofing recycling project ever completed in North America.

The project was conducted in two phases over a two-year period, involved the removal of two layers of vinyl roofing and two different contractors, and encompassed nearly one million square feet of recycled vinyl roofing membrane.

Old vinyl membrane removed in phase one was reprocessed and later used in the manufacture of new vinyl membrane as part of Sika Sarnafil’s Vinyl Roof Recycling Program. Some vinyl membrane installed during phase two contained recycled vinyl recovered from phase one.

#### ABOUT ROOFPOINT

RoofPoint is a voluntary, consensus-based green rating system developed by the Center for Environmental Innovation in Roofing to provide a means for roofing contractors, building managers and designers to select roof systems based on long-term energy and environmental benefits. RoofPoint provides a simple, transparent and professional measure to validate that new and replacement roof systems are designed, installed and maintained in accordance with the most current sustainable best practices.
