PROJECT DESCRIPTION

Sika Corporation developed and introduced Sikaflex® P2G in early 2017. Extensive Field Trials and customer surveys were completed to understand and meet the unique demands of those surveyed. One desire, from many customers who participated in the survey, was to have a new wide mouth cartridge and longer nozzle incorporated into our new packaging. From this market research we were able to develop a new line of Primerless to Glass Auto Glass Replacement (AGR) products to meet these customer demands. Sikaflex® P2G is a cold-applied, high viscous polyurethane adhesive designed for use in replacing direct glazed automotive glass parts with improved adhesion to moldings, good cut-off string and decking. This product provides application properties similar to a premium AGR polyurethane while still remaining cost effective.

Aztek Auto Glass General Manager Lino Flores stated, "Quality in the AGR industry is something that we require, and Sika has not disappointed". The Austin, Texas company has 10 technicians who are now exclusively utilizing Sikaflex® P2G in their AGR installations. Flores also commented, "Additionally, the Sika team have been an essential part of our knowledge and growth in a constantly changing field".

SIKA SOLUTION

Through extensive surveying to the targeted market, Sika introduced new wide mouth nozzles and optimized the Sikaflex® P2G packaging. This new packaging configuration includes (10) wide mouth cartridges with a longer wide mouth nozzle design. These nozzles also have a convenient cartridge puncher incorporated as a tip to easily open the cartridge orifice. Additionally, the quantity per carton has been reduced to meet customer demands. Sikaflex® P2G is also conveniently packaged (9) 600 ml unipacks per carton providing customers different packaging options.
