Sikalastic®-641 Lo-VOC Roofing System

LIQUID APPLIED SINGLE COMPONENT FULLY REINFORCED LO-VOC, LOW-ODOR ROOFING SYSTEM WITH FIBERGLASS OR POLYESTER REINFORCEMENT

PRODUCT DESCRIPTION

Sikalastic®-641 Lo-VOC Roofing System combine cold applied, aliphatic, single component, moisture-triggered polyurethane resins with fiberglass mat or polyester fleece reinforcement to create a seamless membrane and flashing system.

System components are:
- Sika® or Sikalastic® Primer: Select primer per substrate material in accordance with Priming Guide
- Sikalastic®-641 Lo-VOC: Resin used for all systems with Sika Reemat or Sika Fleece reinforcements
- Sika® Reemat: Chopped strand fiberglass mat
- Sika® Fleece 120, 140, 170: Non-woven, needle-punched polyester fleece in various weights

USES

- Sikalastic® RoofPro 10, 15, 20 and 25 year systems, including Sikalastic® RoofPro Built Up, Direct, Plaza Deck/PMA, and Vegetated systems for both new construction and refurbishment
- Ideal for roofs displaying complex details and geometry or when accessibility is limited
- Effective and cost efficient life cycle extension of existing roofs
- Highly reflective Sikalastic®-641 Lo-VOC in White (RAL 9016) suitable for cool roofs and solar roof assemblies.
- Suitable for use for applications such as balconies, terraces, walkways, plazas, and similar applications exposed to foot traffic when provided with a supplemental aggregated or flake surfacing.

CHARACTERISTICS / ADVANTAGES

- Proven technology with over 30 year track record
- Single component - no mixing and ready to use
- Fully reinforced with highly conformable Sika Reemat or Sika® Fleece
- Moisture triggered chemistry that is rapidly weatherproof after application
- Low VOC formula - low Odor
- Highly elastic and crack bridging
- Seamless and fully adhered
- Vapor permeable
- UV resistant and non-yellowing
- Abrasion and chemical resistant
- Adheres to most common construction materials when suitable primer is used

APPROvals / StANDARDS

- FM Approval Standard 4470 for Class 1 Roof Covers
**System Structure**

Sikalastic® RoofPro-641 Lo-VOC System Guide with Sika® RoofPro Metal

1. Primer
   - See Priming Guide

2. Base Layer: Sikalastic®-641 Lo-VOC
   - 20 mils wet–80 sf/gal.

3. Top Layer: Sikalastic®-641 Lo-VOC
   - 20 mils wet–80 sf/gal.

* Detailing: Sika® Flexitape Heavy centered over seams, transitions and properly treated cracks and joints.

Sikalastic® RoofPro-641 Lo-VOC System Guide with Sika® Reemat

1. Primer
   - See Priming Guide

2. Base Layer: Sikalastic®-641 Lo-VOC
   - 30 mils wet 53 sf/gal.
   - 50 mils wet 32 sf/gal.
   - 50 mils wet 32 sf/gal.
   - 50 mils wet 32 sf/gal.

3. Reinforcement:
   - Sika® Reemat Standard
   - 30 mils wet 53 sf/gal.
   - Sika® Reemat Premium
   - 20 mils wet 80 sf/gal.
   - Sika® Reemat Premium
   - 30 mils wet 53 sf/gal.
   - Sika® Reemat Premium
   - 23 mils wet 69 sf/gal.

4. Top Layer: Sikalastic®-641 Lo-VOC
   - 30 mils wet 53 sf/gal.
   - 20 mils wet 80 sf/gal.
   - 30 mils wet 53 sf/gal.
   - 23 mils wet 69 sf/gal.

5. Top Layer: Sikalastic®-641 Lo-VOC
   - 23 mils wet 69 sf/gal.

External Fire Performance

Class A (ASTM E 108)

Chemical Resistance

Strong resistance to a wide range of reagents, including paraffin, gasoline, fuel oil, white spirit, acid rain, detergents and moderate solutions of acids and alkalis. Some low molecular weight alcohols can soften the material. Contact Technical Service for specific recommendations.

Solar Reflectance

85.8 % (ASTM C-1549) (White)

Thermal Emittance

0.86 (ASTM C-1371) (White)

Solar Reflectance Index

108 (ASTM E-1980) (White)

Service Temperature

-22–176 °F (-30–80 °C) intermittent

APPLICATION INFORMATION

Ambient Air Temperature

41 °F (5 °C) min. / 95 °F (35 °C) max

Relative Air Humidity

80 % R.H. max.

Substrate Temperature

41 °F (5 °C) min. / 140°F (60°C) max.

Dew Point

Beware of condensation. The substrate and uncured coating must be ≥ 5 °F (3 °C) above dew point.

Substrate Moisture Content

≤ 4 % moisture content Test method: Sika®-Tramex meter No rising moisture according to ASTM (Polyethylene-sheet)
**Substrate Pre-Treatment**

Refer to Priming Guide to select primer for properly evaluated and prepared substrate. Refer to separate primer Product Data Sheet for application methods, coverage rates, cure times and recoat windows. Always allow primer to cure thoroughly before applying detail or base resin layer.

**Sikalastic® RoofPro-641 Lo-VOC Priming Guide**

¹ Consult Sika.
² New cementitious substrates must be Portland base and be cured min. 28 days.
³ The presence of volatile bitumen may cause discoloration of Sikalastic® if not properly primed.
⁴ Surface evaluation and field adhesion testing.
⁵ Glazed tile consult Sika.
⁶ Pressure treated lumber consult Sika.

**PRODUCT INFORMATION**

**Packaging**
5 gal. (18.9 L) pails

**Shelf Life**
12 months in original, unopened and undamaged sealed containers

**Storage Conditions**
Store dry at 35–77 °F (2–25 °C). Condition material to 50–77 °F (10–25 °C) before using for ease of application

**APPLICATION INSTRUCTIONS**

**SUBSTRATE PREPARATION**

**Substrate Evaluation**

**Concrete and cementitious substrates**
New concrete shall be allowed to cure a minimum of 28 days. Concrete shall have a minimum compressive strength of 20.7 MPa (3000 psi) and exhibit a minimum tensile bond strength of 1.4 MPa (200 psi). time. Moist or sheet curing methods should be used, as opposed to the use of curing compounds, which may interfere with the bond of the membrane. Inspect the concrete, including upstands, and all areas should be hammer tested. Concrete must be suitably finished, preferably by wood float or steel pan. A power float finish is acceptable where the surface is prepared to avoid laitance (a tamped finish is not acceptable). The surface finish must be uniform and free from defects such as laitance, voids or honeycombing.

**Gypsum and Cement based sheathing**
Sheathing boards shall be clean, dry and dust free, and shall be properly secured to the structure. Loose, damaged, or contaminated boards shall be removed and replaced.

**Brick and stone**
Mortar joints must be sound and preferably flush pointed.

**Asphalt**
Asphalt contains volatiles which can cause bleeding and slight non-detrimental staining. The asphalt must be carefully assessed for moisture and/or air entrapment, grade and surface finish.

**Bituminous felt**
Ensure that bituminous felt is firmly adhered or mechanically fixed to the substrate. Bituminous felt shall not contain badly degraded areas.

**Bituminous coatings**
Bituminous coatings shall not have sticky or mobile surfaces, volatile mastic coatings, or old coal tar coatings.

**Metals**
Metals must be in sound condition.

**Wooden substrates**
Plywood and timber based roof decks must be in good condition, firmly adhered and mechanically fixed. All plywood should be identified as conforming to PS 1 for construction and industrial plywood by grade, APA (American Plywood Association) trademark, or equivalent. For maximum smoothness, EXT Type APA, Grade A-C should be used, and the “A” side should be positioned to receive the Sikalastic® resin. Plywood decks to receive resin directly shall be at least 1/2" thick and attached and supported according to APA guidelines, using only non-rusting screw, spiral or coated nail type fasteners. A good practice would be to recess or counter sink fasteners 1/8 to 1/4" and fill with Sikaflex sealant. Suitable edge support to prevent differential deflection between panels shall be provided. Panel edges shall be tongue and groove or supported on solid blocking. Space panels 1/8 to 3/16" at panel ends.

**Paints and coatings**
Ensure the existing material is sound and firmly adhered.

**Existing Sikalastic® RoofPro System**
The existing Sikalastic® RoofPro System shall be soundly adhered to the substrate.

**Surface Preparation**

**Concrete and cementitious substrates**
Cementitious or mineral based substrates must be prepared mechanically using abrasive blast cleaning or scarifying equipment to remove cement laitance and to achieve an open textured surface (CSP 3-5 per ICRI guidelines). Loose friable material and weak concrete must be completely removed and surface defects such as blowholes and voids must be fully exposed. The
amount of embedment coat required may increase over rough or highly porous surfaces.

Repairs to the substrate, filling of joints, blowholes/voids and surface levelling must be carried out. Consult Sika for product recommendations based on project requirements. High spots must be removed by grinding or similar method. Outgassing is a naturally occurring phenomenon of concrete that can produce pinholes in liquid applied materials. The concrete must be carefully assessed for moisture content, air entrapment, and surface finish prior to any roofing work. Particular requirements for priming must also be considered. Installing the primer and membrane either when the concrete temperature is falling or stable can reduce outgassing. It is generally beneficial, therefore, to apply the primer and embedment coat in the late afternoon or evening.

Gypsum and Cement based sheathing
Sheathing boards shall be clean, dry and dust free. Secure loose boards if in sound condition. Damaged or contaminated boards shall be removed and replaced.

Brick and stone
Power wash and use biodegradable non-sudsing detergent with clean water rinse as required.

Asphalt
Power wash and use biodegradable non-sudsing detergent with clean water rinse as required. All major cracks should be sealed to allow continuity of the Sikalastic® RoofPro system.

Bituminous felt
Power wash and use biodegradable non-sudsing detergent with clean water rinse as required. Treat blisters by star cutting and removing any underlying water. Allow to dry and re-adhere using suitable adhesive.

Paints/Coatings
Remove any loose or degraded coatings. Ensure the surface is clean and free from grease.

Sikaplan®/Sarnafil® membranes
Clean membranes with Sarna® Cleaner (PVC membranes) and Sarnafil® T Clean (TPO membranes) prior to application of primer.

Existing Sikalastic® RoofPro Systems
Clean the membrane using a water jet at approximately 140 bar (2000 psi) and biodegradable non-sudsing detergent with clean water rinse. Allow to dry.

MIXING

No mixing necessary

APPLICATION

Detailing
Non-structural cracks up to 1/16” - Detail application not necessary. Apply embedment/base resin layer per below. Non-structural cracks between 1/16” and 1/4” - Rout and seal with Sikaflex® sealant. Apply 40–45 mil resin layer embedded with 3” Sika Flexitape Heavy centered over crack. Alternatively Sika® Joint Tape SA can be applied. Apply embedment/base resin layer per below.

Cracks and joints between 1/4’ and 1’ - Rout and seal with Sikaflex® sealant. Apply bond breaker tape sufficient to span width of crack or joint followed by 40-45 mil resin layer embedded with 6” Sika Flexitape Heavy centered over crack or joint. Apply embedment/base resin layer by terminating Sika® Reemat or Sika® Fleece at edges of crack or joint overlapping Sika® Flexitape Heavy a minimum of 2 inches on both sides.

Metal seams and plywood/coverboard joints - Apply 40–45 mil resin layer embedded with 3 or 6” Sika® Flexitape Heavy centered over seam. Alternatively Sika® Joint Tape SA can be applied centered over seam. Apply embedment resin layer per below.

Transitions between dissimilar materials - Apply 40–45 mil resin layer embedded with Sika® Flexitape Heavy centered over edge. Apply embedment resin layer per below.

Joints greater than 1” - Treat as expansion joint. Consult Sika for recommendations.

Metal seams and plywood/coverboard joints - Apply 40–45 mil resin layer embedded with 3 or 6” Sika® Flexitape Heavy centered over seam. Alternatively Sika® Joint Tape SA can be applied centered over seam. Apply embedment resin layer per below.

Transitions between dissimilar materials - Apply 40–45 mil resin layer embedded with Sika® Flexitape Heavy centered over edge. Apply embedment resin layer per below.

Embedment/Base Resin Layer with Sika® Reemat Reinforcement
Mixing not required. Apply Sikalastic®- 641 Lo-VOC per RoofPro System Guide at the coverage rate in the RoofPro System Guide with a 1/2” nap phenolic resin core roller. Material can also be squeegee or spray ap-
plied, in which case it should be backrolled prior to embedding Sika® Reemat. Place Sika® Reemat in wet base resin layer overlapping seams a minimum of 2” (place frayed edge over cut edge of roll) and apply wet roller to topside to saturate completely. After approximately 5 minutes the binder will begin to dissolve allowing the fiber strands to conform to irregular surfaces. Do not over work once the fibers have conformed to the substrate. Allow to cure 12 hours at 70 °F and 50 % R.H. or until tack free before top resin layer. Keep clean and dry and apply top resin layer within 7 days. If window is exceeded clean with non-sudsing detergent and clean water rinse, and allow to dry prior to application of Sika® Reactivation Primer.

Top Resin Layer with Sika® Reemat Reinforcement
Mixing not required. Apply Sikalastic®- 641 Lo-VOC at the coverage rate in the RoofPro System Guide with a 1/2” nap phenolic resin core roller. Material can also be squeegee or spray applied, in which case it should also be backrolled. In the case of RoofPro 25 allow the first top resin layer to cure 12 hours at 70 °F and 50 % R.H. or until tack free before applying second top resin layer. On top of the complete RoofPro system additional resin layers may be applied with aggregate for slip resistance - consult Sika for recommendations. Keep clean and dry and apply additional resin layers within 7 days. If window is exceeded clean with non-sudsing detergent and clean water rinse, and allow to dry prior to application of Sika® Reactivation Primer.

Wet on Wet Application with Sika® Fleece Reinforcement
Mixing not required. To primed substrate apply two-thirds of the Sikalastic®- 641 Lo-VOC specified in the RoofPro System Guide with a 1/2” nap phenolic resin core roller. Immediately place specified Sika® Fleece into wet resin overlapping seams a minimum of 3” along the edge and 6” end-to-end. Apply wet roller to topside with light pressure to saturate fleece from bottom and ensure air pockets are completely removed. Immediately apply all of remaining one-third of Sikalastic®- 641 Lo-VOC resin specified in the RoofPro System Guide to ensure even and complete fleece saturation from topside and uniform texture.

Aggregated or Flake Surfacing
Supplemental aggregate and flake surfacing is required for all applications that will experience direct foot traffic such as balconies, terraces, walkways, and plazas, and is recommended for areas that experience maintenance foot traffic. Supplemental aggregate surfacing is applied in a supplemental resin layer after the Sikalastic® membrane has been installed and is not applied into the roofing/waterproofing membrane itself.

Seed and Back Roll Option
The Seed and Backroll option is primarily intended for use for maintenance traffic-type applications where enhanced slip resistance is required. Apply Sikalastic®- 641 Lo-VOC resin at 15 mils wet film thickness to the installed, cured membrane system. While the supplemental resin application is still wet broadcast to rejection (full broadcast, beach) with kiln dried, iron free aggregate. Back roll the surface to encapsulate the aggregate in the Sikalastic® resin.

Full Broadcast and Seal Option
The Full Broadcast and Seal option is intended for use for applications where both enhanced slip resistance and physical protection of the roofing membrane is required. Apply Sikalastic®- 641 Lo-VOC resin at 15 mils wet film thickness to the installed, cured membrane system. While the supplemental resin application is still wet broadcast to rejection (full broadcast, beach) with kiln dried, iron free aggregate. Remove excess aggregate after cure. Seal with an additional coat of Sikalastic® resin.

Decorative Quartz and Decorative Flake Options
The Decorative Quartz and Decorative Flake options are intended for use for applications where enhanced slip resistance, physical protection of the roofing membrane, and a decorative element is required. Apply Sikalastic®- 641 Lo-VOC resin at 15 mils wet film thickness to the installed, cured membrane system. While the supplemental resin application is still wet broadcast to rejection (full broadcast, beach) with colored quartz aggregate or synthetic flakes. Remove excess aggregate/flakes after cure. Seal with a coat of Sikalastic®- 748 PA at 15 mils wet film thickness. Decorative flakes can also be seeded at less than full broadcast quantities. Remove excess aggregate/flakes after cure. Seal with a coat of Sikalastic®- 748 PA at 15 mils wet film thickness.

Aggregate Selection
Use clean, rounded or semi-angular, oven dried quartz sand with a minimum hardness of 6.5 per the Moh’s scale. It should be supplied in pre-packaged bags and free of metallic or other impurities. The following size gradations are recommended:

- 16–30 or 20–40 mesh for pedestrian traffic systems
- Sika® DecoQuartz Blends or equivalent for Decorative Quartz systems
- Use virgin vinyl flakes, supplied in pre-packaged bags and free from impurities. The following is recommended:
  - Sika® DecoFlake Blends or equivalent for Decorative Flake systems

CLEANING OF TOOLS
Clean all tools and application equipment with appropriate solvent immediately after use. Hardened and/or cured material can only be removed mechanically.
LIMITATIONS

- Minimum age of concrete must be 28 days depending on curing and drying conditions.
- Do not thin with solvents.
- Do not store materials outdoors directly exposed to sunlight and moisture. Cover and protect material with breathable type covers such as canvas tarpaulins to allow venting and protection from weather and moisture. Observe temperature storage and conditioning requirements.
- Do not apply to substrate surfaces where moisture vapor transmission will occur during application and cure. This condition may be checked using ASTM D 4263 (Polyethylene sheet method).
- Substrate must be dry prior to application. Do not apply to a frosted, wet or damp surface. Allow sufficient time for the substrate to dry after rain or inclement weather, as there is the potential for bonding problems.
- On substrates likely to exhibit outgassing apply during falling ambient and substrate temperature. If applied during rising temperature pinholing or blistering may occur.
- Use sunglasses with UV filter when applying highly reflective Sikalastic®-641 Lo-VOC White (RAL 9016).
- Do not use for indoor applications unless sufficient airflow and ventilation are provided to prevent odors and/or vapors from leaving the immediate work area.
- Precautions should be taken to prevent odors and/or vapors from entering the building/structure, including but not limited to turning off and sealing air intake vents or other means of ingress for odors and/or vapors into the building/structure during product application and cure.
- For areas with direct exposure to heavy or frequent foot traffic, an additional wear coat protection with slip resistant aggregate is required. Opening to traffic prior to cure may result in loss of aggregate or permanent staining and subsequent premature failure.
- Do not apply cementitious products, such as tile mortar directly onto Sikalastic®-641 Lo-VOC. See Sikalastic®-624 WP or Sikalastic®-644 Lo VOC Product Data Sheet.
- Any repairs required to achieve a level surface must be performed prior to application (consult a Sika representative for guidance on various product solutions). Surface irregularities may reflect through the cured system.
- When applying over existing coatings or membranes compatibility and adhesion testing and subsequent approval by Technical Services is required.
- Opening to traffic prior to cure may result in loss of aggregate or permanent staining and subsequent premature failure.
- On grade concrete decks should not be covered with Sikalastic® RoofPro membrane systems.
- Unvented metal pan, split/sandwich slab with encapsulated membrane and/or insulation, cinder fill decks, and lightweight insulating concrete deck overlays should not be covered with Sikalastic® RoofPro systems without additional deck evaluation and subsequent approval by Technical Services.
- Do not subject to continuous immersion, i.e., fountains, ponds, pools, or interior of tanks.
- Not recommended for use over ceramic tile.

BASIS OF PRODUCT DATA

Results may differ based upon statistical variations depending upon mixing methods and equipment, temperature, application methods, test methods, actual site conditions and curing conditions.

LOCAL RESTRICTIONS

Prior to each use of any Sika product, the user must always read and follow the warnings and instructions on the product’s most current Product Data Sheet, product label and Safety Data Sheet which are available online at http://usa.sika.com/ or by calling Sika’s Technical Service Department at 800.933.7452 nothing contained in any Sika materials relieves the user of the obligation to read and follow the warnings and instructions for each Sika product for each Sika product as set forth in the current Product Data Sheet, product label and Safety Data Sheet prior to product use.

ECOLOGY, HEALTH AND SAFETY

Keep container tightly closed. Keep out of reach of children. Not for internal consumption. For industrial use only. For professional use only. For further information and advice regarding transportation, handling, storage and disposal of chemical products, users should refer to the actual Safety Data Sheets containing physical, ecological, toxicological and other safety related data. Read the current actual Safety Data Sheet before using the product. In case of emergency, call CHEMTREC at 1-800-424-9300, International 703-527-3887.
Prior to each use of any Sika product, the user must always read and follow the warnings and instructions on the product’s most current Product Data Sheet, product label and Safety Data Sheet which are available online at http://usa.sika.com/ or by calling Sika’s Technical Service Department at 800-933-7452. Nothing contained in any Sika materials relieves the user of the obligation to read and follow the warnings and instruction for each Sika product as set forth in the current Product Data Sheet, product label and Safety Data Sheet prior to product use. SIKA warrants this product for one year from date of installation to be free from manufacturing defects and to meet the technical properties on the current Product Data Sheet if used as directed within shelf life. User determines suitability of product for intended use and assumes all risks. Buyer’s sole remedy shall be limited to the purchase price or replacement of product exclusive of labor or cost of labor.
