**SELF CERTIFICATION FOR CDPH STANDARD METHOD
V1.2-2017**

Lyndhurst, 20 August 2018

To Whom it May Concern:

Attached please find a test report for CPDH Standard Method V1.2-2017 from Berkeley Labs showing that Sikafloor® 1610 passed the VOC criteria for subject standard. Sika Corporation manufactures Sikafloor® 1610 at its Marion, OH facility.

Sika Corporation maintains a Quality Management System at the Marion facility that has achieved ISO 9001 2015 certification. As part of its ISO 9001 2015 program the Marion facility tests finished products and incoming raw materials to insure that the products produced in the Marion facility meet their quality requirements.

The Marion facility manufactures multiple two component flooring products that are formulated from the same set of raw materials. While there might be minor differences in exact composition in these different formulations the raw materials from which they are produced remains the same. The list below represents the flooring products produced with the same set of raw materials at the Marion facility.

Sikafloor® 161
Sikafloor® 264

PAGES 2/2
DATE 20 August 2018

Sika Corporation choose to test Sikafloor® 1610 for CPHD Standard Method v1.2-2017 as it is the formulation with the highest VOC content, as measured by EPA Method 24, of the products listed above. As Sikafloor®1610 represents the worst case scenario of VOC content it is Sika's determination that all of the other flooring products in the list above would have less VOC and therefore lower values for CPHD Method v1.2-2017.

Based on the above information Sika Corporation can certify that all of the products above will meet the requirements of CPHD Standard Method v1.2-2017.

If further information is required please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Steven A. Rosenberg". The signature is fluid and cursive, with a long horizontal stroke extending to the right.
