

DIVISION 3 - CONCRETE
Section - 03930 Concrete Rehabilitation
Gravity Feed Crack Repair

Part 1 – General

1.01 Summary

- A. This specification describes the grouting of cracks by gravity flow with an epoxy resin adhesive.

1.02 Quality Assurance

- A. Manufacturing qualifications: The manufacturer of the specified product shall be ISO 9001/9002 certified and have in existence a recognized ongoing quality assurance program independently audited on a regular basis.
- B. Contractor qualifications: Contractor shall be qualified in the field of concrete repair and protection with a successful track record of 5 years or more. Contractor shall maintain qualified personnel who have received product training by a manufacturer's representative
- C. Install materials in accordance with all safety and weather conditions required by manufacturer or as modified by applicable rules and regulations of local, state and federal authorities having jurisdiction. Consult Material Safety Data Sheets for complete handling recommendations.

1.03 Delivery, Storage, and Handling

- A. All materials must be delivered in original, unopened containers with the manufacturer's name, labels, product identification, and batch numbers. Damaged material must be removed from the site immediately.
- B. Store all materials off the ground and protect from rain, freezing or excessive heat until ready for use.
- C. Condition the specified product as recommended by the manufacturer.

1.04 Job Conditions

- A. Environmental Conditions: Do not apply material if it is raining or snowing or if such conditions appear to be imminent. Minimum application temperature 40°F (5°C) and rising.
- B. Protection: Precautions should be taken to avoid damage to any surface near the work zone due to mixing and handling of the specified material.

1.05 Submittals

- A. Submit two copies of manufacturer's literature, to include: Product Data Sheets, and appropriate Material Safety Data Sheets (MSDS).

1.06 Warranty

- A. Provide a written warranty from the manufacturer against defects of materials for a period of one (1) year, beginning with date of substantial completion of the project.

Part 2 - Products

2.01 Manufacturer

- A. **Sikadur 35 Hi-Mod LV**, as manufactured by Sika Corporation, 1682 Marion Williamsport Road, Marion, Ohio 43302, is considered to conform to the requirements of this specification.

2.02 Materials

- A. Epoxy resin adhesive binder:
1. Component "A" shall be a modified epoxy resin of the diglycidether bisphenol A Type containing suitable viscosity control agents. It shall not contain butyl glycidyl ether.
 2. Component "B": shall be primarily a reaction product of a selected amine blend with an epoxy resin of the diglycidether bisphenol A Type containing suitable viscosity control agents, pigments, and accelerators.
 3. The ratio of Component "A": Component "B" shall be 2:1 by volume.

2.03 Performance Criteria

- A. Typical Properties of the mixed epoxy resin adhesive binder:
1. Pot life: min. 25 minutes (60 gram mass @ 73F)
 2. Tack-free time: (20 mil thickness at 73F): 3 - 3.5 hours
 4. Color: clear, amber
- B. Typical Properties of the mixed neat cured epoxy resin adhesive binder:
1. Compressive Properties (ASTM D-695) at 28 days
 - a. Compressive Strength: 13,000 psi min (89.6 MPa)
 - b. Compressive Modulus : 320,000 psi (2,200 MPa)
 2. Tensile Properties: (ASTM D-638) at 14 days
 - a. Tensile Strength: 8,900 psi min (61 MPa)
 - b. Elongation at Break: 5.4%
 - c. Modulus of Elasticity: 410,000 psi (2,800 MPa)
 3. Flexural Properties: (ASTM D-790) at 14 days
 - a. Flexural Strength (Modulus of Rupture): 14,000 psi min (97 MPa)
 - b. Tangent Modulus of Elasticity in Bending: 370,000 psi (2,800 MPa)
 4. Shear Strength (ASTM D-732) at 14 days: 5,100 psi min (35 MPa)
 5. Total water absorption (ASTM D-570) at 7 days: 0.27% (2 hour boil)
 6. Bond Strength (ASTM C-882) Hardened Concrete to Hardened Concrete
 - a. 2 days (dry cure): 2,800 psi min (19 MPa)
 - b. 14 days (moist cure): 2,900 psi min (17 MPa)
 7. Deflection Temperature (ASTM D-648) at 14 days: 129F min. (fiber stress loading = 264 psi)

Note: Tests above were performed with the material and curing conditions @ 71°F – 75°F and 45-55% relative humidity.

Part 3 – Execution

3.01 Surface Preparation

- A. Vee notch the surface of the crack with mechanical router or hand chipping tool to a maximum width of ¼". Remove loose debris. The substrate may be dry or damp prior to product application. Where accessibility to the underside of the slab is available, seal all visible cracks with an epoxy resin adhesive paste or portland cement-based quicksetting compound to act as a dam to hold the liquid epoxy resin adhesive until cured.

3.02 Mixing and Application

- A. Mixing the epoxy resin adhesive binder: Proportion 2 parts by volume of Component "A" and 1 part of Component "B" by volume into a clean, dry mixing pail. Mix thoroughly for 3 minutes min. with a jiffy paddle on a low-speed (400-600 rpm) drill. Mix only that quantity of material that can be used within its pot life (20-30 minutes at 73F).
- B. Placement Procedures: Place the mixed epoxy resin adhesive into the vee-notch crack. Replenish the reservoir with the mixed epoxy resin adhesive until the crack has been completely filled.
- B. If penetration of any crack is impossible, consult the Engineer before discontinuing the procedure. If modification of proposed procedure is required to fill the crack, submit modification in writing to the Engineer for acceptance prior to proceeding.
- C. Adhere to all limitations and cautions for the epoxy resin adhesive binder in the manufacturers current printed literature.

3.03 Cleaning

- A. The uncured epoxy resin adhesive can be cleaned from tools with an approved solvent. The cured epoxy resin adhesive can only be removed mechanically.
- B. Leave finished work and work area in a neat, clean condition without evidence of spillovers onto adjacent areas.

SC-004

Sikadur 35, Hi-Mod LV Crack Filler (Horizontal)

1. Pour neat 35, Hi-Mod LV epoxy resin adhesive into vee-notched cracks.
2. Continue placement until cracks are completely filled.

Note: Prior to filling, seal underside of slab if cracks reflect through.

The preceding specifications are provided by Sika Corporation as a guide for informational purposes only and are not intended to replace sound engineering practice and judgment and should not be relied upon for that purpose. **SIKA CORPORATION MAKES NO WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, AS TO THE ACCURACY, COMPLETENESS OR THE CONTENTS OF THESE GUIDE SPECIFICATIONS.** Sika Corporation assumes no liability with respect to the provision or use of these guide specifications, nor shall any legal relationship be created by, or arise from, the provision of such specifications. **SIKA SHALL NOT BE RESPONSIBLE UNDER ANY LEGAL THEORY TO ANY THIRD PARTY FOR ANY DIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND ARISING FROM THE USE OF THESE GUIDE SPECIFICATIONS.** The specifier, architect, engineer or design professional or contractor for a particular project bears the sole responsibility for the preparation and approval of the specifications and determining their suitability for a particular project or application.

Prior to each use of any Sika product, the user must always read and follow the warnings and instructions on the product's most current Technical Data Sheet, product label and Material Safety Data Sheet which are available at www.sikaconstruction.com or by calling (201) 933-7452. Nothing contained in any Sika materials relieves the user of the obligation to read and follow the warnings and instructions for each Sika product as set forth in the current Technical Data Sheet, product label and Material Safety Data Sheet prior to product use.
